## Over Length Studs

These studs are offered to answer the question of "Do you have something longer than stock?" They range from 3/8" or 10mm to 1/2" or 13mm longer than stock bolts. Find the application and then check this list for availability. The actual length can be checked in the dimensional charts.

## Under Length Studs

Dorman #	Under Length
610-254	610-324

This under length stud was created to eliminate the need to disassemble the hub from the steering knuckle when trying to replace the original length stud on the GM W body. They are the 98-88 Chevrolet Lumina, 97-88 Oldsmobile Cutlass Supreme, 96-88 Pontiac Grand Prix and the 97-88 1/2 Buick Regal.

## Retro-Fit Nuts

At Dorman, we have taken the opportunity to create a nut that you can use when retro-fitting newer factory wheels that came off of vehicles having Metric threads, onto older vehicles having inch threads. We took the Metric style nut and created a nut having the same outside shape but with inch size threads. Just be sure that the number of bolts and the bolt circle are the same. This way you can still use the wheel nut covers that came with the late model wheels.

Thread Size	Part #	Use in place of

## Proper Seating Of Wheel Studs

Always use the stud and nut length specified by the wheel manufacturer. Properly seat wheel studs by using a hydraulic press. Improperly seated wheel studs can lead to fatigue causing the stud to crack.

- To ensure proper nut torque, use a calibrated torque wrench or calibrated air driven torque wrench. When replacing a broken stud, always check and/or replace the remaining studs. Treat a broken stud as a warning sign. The same problem may be in the other studs but have not yet failed.
- When replacing a left-hand threaded stud with a right-hand threaded stud, replace all studs and nuts on the vehicle with right-hand threads.

Wheel Tightening Sequence

### Wheel Tightening Sequence:

Wheel fasteners should be tightened to their final torque in small increments as follows:

1. Hand tighten each fastener.
2. Then tighten each fastener to 20-25% of its final torque.
3. Tighten each fastener another 20-25% of its final torque.
4. Repeat step 3 until the final torque is reached.

Follow manufacturer's recommended torque sequence or pattern to spread clamping load evenly.

Retorque the wheel fasteners after the first 100 miles.

**DON'T FORGET**

**To complete the job, your customer may need:**

- torque wrench
- universal lug wrench
- lug nut adapters
- dust caps & shields
- double ended wheel nut socket
- wheel center caps
- lock nuts
- torque sticks
- air inflators
- airchuck

**Wheel Bolt Installation Tips**

- When inserting a new wheel bolt, be sure the bolt is pressed firmly against the hub.
- A small wheel stud press will allow you to press in the stud without removing the hub.
- Install the wheel bolt dry. Do not use thread locker or lubricant unless specified by OE manufacturer.

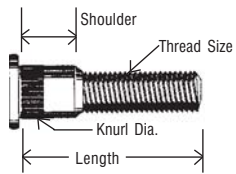

**Determining Serrated Bolt Hole Size:**

- If installing a wheel stud in a custom flange or axle, the drilled hole must be sized for the wheel stud.
- The hole should be .017" to .027" (.43mm to .69mm), smaller than the size of the knurl.
- Do not install wheel bolts by pulling them in with the nut.
- It is difficult to fully seat the wheel bolt without exceeding the OE manufacturer's torque specification and damaging bolt.

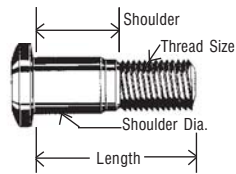

Need a larger or shorter wheel stud? See page 140 for over and under length studs.

## GM Brake Codes

### GM BRAKE SYSTEM IDENTIFICATION GUIDE

On some General Motors cars and trucks, the brake system option code must be determined in order to identify the proper part number required.

This Brake System Option Code can be found on the "Service Parts Identification" sticker located in the following places:

- Passengers Cars—inside trunk on spare tire cover or inside the console glove compartment.
- Light Trucks—inside glove compartment.
- Vans—underneath hood or glove compartment.

Example:

Bold : Brake System Option Code

The charts below will also assist you in determining the brake system option code:  
1983-82 GM A-Body Brake Systems

- On some GM vehicles the gross vehicle weight can be used to better determine the type of brake system the vehicle is equipped with.
- Vehicle gross weight is on certification label on inside of driver's door.

GVW	BRAKE SYSTEM
Under 1670 KG	JA-6 Extra Light, Manual Brakes
1670 KG to 1784 KG	JA-1 Light Duty w/power brakes
1784 KG to 1815 KG	JA-8 Medium Duty w/power brakes
1815 KG to 2000 KG	JA-2 Heavy Duty w/power brakes
	JA-3 Wagon w/power brakes
