**Brake Kits and Components** 

Braking Solutions for a World in Motion www.Wilwood.com

# wilwood

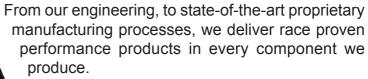

# A COMPANY BUILT ON WINNING!

Since 1977, Wilwood Engineering has been at the forefront of high performance disc brake technology. Early brake designs were developed to give stock cars racing on short track and super speedways superior braking performance with greater reliability. Today, Wilwood is a global manufacturer of brake systems and components that are installed on over one million vehicles a year.

# WE WOULD LIKE TO INVITE YOU TO VISIT OUR GREATLY EXPANDED WEBSITE AT: www.wilwood.com

Wilwood's totally redesigned and expanded web site is the most comprehensive within the automotive industry. It is extraordinarily easy to find the right Wilwood product using the improved part number and/or item description look up capabilities, thus enabling you to locate the item you need in a snap. This catalog highlights just a fraction of what we have to offer. You can find our complete product line on our website, <a href="https://www.wilwood.com">www.wilwood.com</a>, categorized by components and brake kits. Fact is, we have winning brakes for everything from Short Track Dirt and Asphalt, to Super Speedway, all available with a click of a mouse.

# RACE PERFORMANCE TECHNOLOGY BUILT INTO EVERY WILWOOD PRODUCT

And, if you still need assistance, please call our Customer Service Department at (805) 388-1188 where a knowledgeable technical representative will help you select the brake system components for your particular application.

If you want trophy-winning stopping power, you need Wilwood Disc Brakes.

# Billet Superlite 6 / ST Radial Mount Caliper

- Starting at just 4.84 pounds, yet extremely durable
- Six piston differential bore configuration provides balanced loading for even pad wear in sustained high heat environments
- Fits rotors from 11.75" to 13.00" in diameter, and widths from .81" to 1.38"

<sup>\*</sup>Equipped with Wilwood's exclusive Thermlock "ST" pistons to further reduce heat transfer from the pads to the caliper body, seals, and fluid

# Forged Superlite FSLI / ST Caliper

- · Lightweight, starting at just 4.40 pounds
- Redesigned with internal fluid ports that eliminate the external fluid crossover tubes
- Available in differential bore or standard symmetrical bore piston configurations
- Fits rotors from 11.75" to 13.00" in diameter, and widths from .81" to 1.25"

<sup>\*</sup>Equipped with Wilwood's exclusive Thermlock "ST" pistons to further reduce heat transfer from the pads to the caliper body, seals, and fluid

### **DynaPro Radial Mount Caliper**

- Four corner bleed screws allow the caliper to be mounted in any front, rear, right, or left position
- Fits rotors from 10.00" to 12.19" in diameter, and widths from .38" to 1.25"
- Utilizes a 3.00 cubic inch type 7816 pad available in many Wilwood compounds

# **Technical Tip**

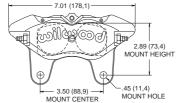

### Caliper Rebuilding

If you race on a weekly basis throughout the year, you should disassemble your calipers mid-season and inspect the caliper seals for excessive wear or hardness caused by heat. Asphalt racers generally experience more heat and should do inspections more frequently, especially after racing on a track where high temperatures are reached. Race teams usually replace caliper seals after each race to ensure proper disc brake performance. Disassembly and replacement of the seals is a simple process and can prevent catastrophic brake failure.

### **Narrow DynaPro Lug Mount Caliper**

- Forged billet caliper provides superior strength over machined billet designs
- Direct replacement for all narrow mount Dynalite calipers with 3.50" mounting tabs
- Internal fluid passage eliminates the need for external crossover tubes
- · SRS bridge plates eliminate pad gouging

# **Billet Narrow Dynalite Radial Mount Caliper**

- · Compact & lightweight starting at 2.70 pounds
- Radial mount kits are used to install this radial caliper in place of a tab mount caliper
- Internal fluid passage eliminates external crossover tubes
- SRS bridge plates eliminate pad gouging
- Uses type 7216 pads

# **Technical Tip**

## **Pad Selection**

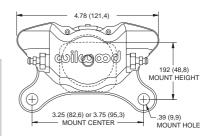

Proper selection of a brake pad compound is critical to disc brake system performance. Each material has specific torque and wear characteristics relative to its operating temperature. Track conditions and driving style can also influence pad requirements. For best performance, final selection of pad material often requires evaluation at the track over a range of actual race conditions. Please reference the Wilwood Brake Pad Catalog, page 13 in this catalog, or visit our website at www.wilwood.com for descriptions of the various compounds available. You may also contact the Wilwood Customer Service Department at (805) 388-1188 for recommendations, or e-mail us at: support@wilwood.com.

### **DynaPro Single Caliper**

- Comes in two bore sizes, 1.75" or 1.38" and two mounting options, 3.75" or 3.25"
- Four corner bleed screws allow the caliper to be mounted in any front, rear, right, or left position
- Internal fluid passage eliminates external crossover tubes
- One piece stainless steel pistons resist corrosion and slow the heat transfer from the pads

# **GP 320 Caliper**

- · Lightweight at just 1.70 pounds
- Fits rotors from 9.00" to 11.50" in diameter, and widths from .19" to .81"
- Quick-Clip retention pin provides easy access for pad service without caliper removal
- Utilizes a 1.03 cubic inch type 6211 pad available in many Wilwood compounds

# Technical Tip

### **Caliper Mounting**

Brake calipers should be mounted square with the rotor to prevent excessive piston knock-back and uneven pad wear. While looking at brake area, have someone apply brakes. Caliper should not move (square itself to rotor): only the pistons and pad should move. If caliper is not parallel with rotor, shims should be used between mounting bracket and caliper ears for proper alignment. Caliper brackets should be strong enough not to deflect under heavy braking. All caliper mounting bolts should be of the highest quality and lockwired for safety.

# **Brake Pads**

# Compound

# Characteristics

PolyMatrix

- · Ultimate high friction compound with aggressive initial response.
- Long wear rate for severe duty, sustained high temperature braking.
- Immediate low temperature response for qualifying laps, restarts, and any other applications requiring high response at low temperatures.
- · Compatible with iron, steel, and titanium rotors.
- Used on lightweight sprints using steel plate rotors that require fast response at low temperatures.

PolyMatrix

- Medium-high friction compound with good cold response and a gently rising friction curve as temperature
- Smooth, predictable engagement with excellent control over a wide range of applications.
- Long wearing pad in the middle temperature ranges with moderate wear in sustained high heat conditions.
- · Easily bedded without abrasion on new iron or steel rotors.
- Hard braking dirt late models, DIRT modifieds, and rear inboard sprint brakes with vented iron or steel rotors.

· High friction compound with smooth initial response a steady rise in friction as temperature and pedal pressure

PolyMatrix

- increases.
- Long wear rate for severe duty, sustained high temperature braking.
- · Compatible with iron, steel, and titanium rotors.
- Performs best when initially bedded on new rotors or used rotors that have only been run with H compound.

- PolyMatrix
- · Utilized with disc brake conversions on street rods, muscle cars, custom show cars and all moderate performance applications where low noise and dust are important
- This compound also can be used for specialized aluminum rotors, and compatible with all vented iron rotors.

- Medium-high friction compound with good cold response.
- Smooth, predictable engagement with excellent control over a wide range of applications.
- Long wearing pad in the middle temperature ranges with moderate wear in sustained high heat conditions.
- Easily bedded without abrasion on new iron or steel rotors.
- · Hard braking dirt late models, DIRT modifieds, and rear inboard sprint brakes with vented iron or steel rotors.

- Sintered Metallic
- Medium to high friction compound with a steadily increasing torque curve as temperatures rise.
- Good wear and friction properties with high fade resistance for special applications where intermittent high temperature spikes are observed between periods of moderate temperature braking.
- Sprint cars with titanium rotors, speedway cars with plate steel rotors, and other specialized vehicles where high temperature fade and wear resistance are necessary to offset diminished cooling capacity due to rotor material and configuration.

- Utilized with disc brake conversions on street rods, muscle cars, custom show cars and all moderate performance applications where low noise and dust are important
- Traditional racer favorite compound for specialized application aluminum rotors, and compatible with all vented iron rotors.

### GT-36 / GT-40 / GT-48 Curved Vane Rotors

GT curved vane rotors are built for the extreme conditions of professional motorsports. The superior heat absorption and dissipation characteristics of these heavy wall directional vane rotors are the keys to preventing heat fade and realizing long service life from the rotors and pads. All rotors are cast from premium grade, long grain carbon iron for long wear, thermal stability, and resistance to distortion. Every GT rotor is fully detail machined to eliminate stress points and unnecessary weight away from the pad sweep face. The faces and O.D. are precision turned to less than .001" for flatness, parallelism, and run-out. An asymmetrical face slot pattern provides smoother engagement through reduced harmonics and improved thermal balance between the I.D. and O.D. of the rotor. Every rotor is then individually dynamic balanced to provide vibration free performance at any speed. These rotors provide the highest cooling capacity and longest service life for extreme braking short tracks and road courses.

# HD-36 / HD-40 / HD-48 Directional Vane Rotors

HD Series directional vane rotors provide superior thermal stability and long service for asphalt late models, modifieds, open wheel, and most other types of high heat competition applications. All HD rotors are cast from premium grade, long grain carbon iron for long wear, high thermal stability and resistance to distortion. Thick wall pad sweep faces with directional cooling vanes provide superior heat absorption and dissipation qualities to prevent heat fade and realize long service life from the pads and rotors. All HD rotor faces are precision turned to less than .001" for flatness, parallelism, and run-out for smoother engagement and reduced vibration.

# **Rotors**

# **Ultra-Light 32 Curved Vane Rotors**

Ultra-Light UL-32 directional vane rotors provide an excellent balance of efficient cooling and lower rotating mass on hard braking dirt tracks or rear axle service on pavement cars. UL rotors are cast from premium grade, long grain carbon iron for long wear, high thermal stability, and resistance to distortion. UL-32 rotors are production machined and well suited to a wide range of sportsman racing categories.

# Ultra-Light 30 / 32 Vane Rotors

Ultra-Light UL straight vane rotors provide high value performance and rugged durability for a wide range of competition, high performance, and sport driving applications. Don't confuse these rotors with bargain priced off-brand named parts. Wilwood's modern manufacturing capability, combined with large scale economies, make it possible to offer this level of quality and performance at such an affordable price.

The straight vane design also makes it possible to use the same rotor on left or right hand mounting locations.

# **Ultra-Light 32 Vane Drilled Rotors**

When it comes to rotors, racers are constantly searching for the ultimate balance between the lowest weight and the ability to effectively manage heat. Decreased rotating weight in the drive line provides quicker deceleration under braking and quicker acceleration out of the corners. Lower weight also benefits handling with improved spring and shock control over the unsprung suspension mass. Wilwood's ULD-32 drilled iron rotors provides effective lightweight options for sprints, late models, modifieds, and other competition applications that race in low to medium temperature ranges.

# Rotors

# **Super Alloy Rotors**

Super Alloy vented or solid rotors are Sprint racing's lightest. These rotors provide a cost effective, lightweight solution with quick response, long service life from the pads, and consistent braking at all temperatures. Lowered rotating weight promotes quick acceleration, deceleration, and improved handling.

| Rotor Or       | dering In     | formati        | on             |                   |                     |                 |               |              |             |                 |               |                  |  |

### Ultra-Light 30 / 32 Vane Scalloped Rotors

ULS Series Scalloped Rotors feature a fully machined scallop configuration that provides the highest degree of weight reduction on a vented straight vane iron rotor. Scallop machining will remove as much as three pounds, or nearly 33% of the rotor mass. The vented castings provide increased cooling capacity over machined steel plate rotors, with improved structural durability over drilled rotor designs. Wilwood's ULS scalloped iron rotors provides effective lightweight options for sprints, late models, modifieds, and other competition applications that race in low to medium temperature ranges.

### **Aluminum Sprint / Midget Rotors**

Full symmetrical machining provides perfect balance, perfect flatness and the truest rotation of any aluminum rotor being built. Wilwood's engineered drill and relief slot pattern combines the highest degree of weight reduction with the highest resistance to thermal distortion in the contact faces. You get smooth engagement and a consistent full pedal from the low knock-back characteristics of this design. A durable black anodized finish prevents corrosion and simplifies the visual inspection of the contact faces. The best results are always achieved using PolyMatrix Q compound brake pads with these rotors.

# WARNING: SPECIAL RACING APPLICATION ONLY

ALUMINUM ROTORS (PAGE 12) ARE <u>UNSAFE</u> FOR STREET USE • ALUMINUM ROTORS ARE NOT SUITABLE FOR MOST FORMS OF RACING AND CAN RESULT IN CATASTROPHIC FAILURE WHEN MISUSED

READ DISCLAIMER OF WARRANTY LOCATED ON THE INSIDE BACK COVER OF THE CATALOG

# **Steel Rotors**

Steel rotors provide a durable lightweight option in applications where sustained temperatures remain in the low to moderate range, and high heat spikes are only observed on an intermittent basis. Steel rotors can be utilizes in lighter weight open wheel cars such as sprints and modifieds, and a variety of light weight, open wheel road course racers. A special alloy and proprietary manufacturing processes give these rotors high resistance to thermal distortion with excellent friction and wear characteristics against the pads.

#### **Rotor Bolt Kits**

Wilwood's bolt kits are made from the highest quality materials and include bolts, applicable type nut, and necessary hardware to attach the rotor.

**NOTE:** It is very important not to over torque these bolts. Please utilize the torque specifications listed below.

- 5/16-24 Torque to 180 in-lbs.
- 1/4-28 Torque to 85 in-lbs.

# **Master Cylinders**

### **Combination Remote Master Cylinder**

Combination Remote Master Cylinders offer six different bore sizes and four different installation configurations that are available with this master cylinder kit. Precision machined from high strength aluminum, this kit includes both small and large size reservoirs which can be mounted directly on the master cylinder or remotely mounted for more convenient service access. Standard mounting bolt hole configurations provide easy applications for racing and off road vehicles, specialty cars, recreation, and industrial vehicles.

# **High Volume Master Cylinder**

Wilwood High-Volume Aluminum Master feature high pressure die-cast bodies from high-grade aluminum. Wilwood. High-Volume Master Cylinders have the highest fluid capacity of any integral reservoir design. With a total capacity of 8.2 ounces, there is at least 26% more fluid volume than other brands. With 1-7/16" of piston travel, it offers extra margin when used with large piston calipers. Heavy duty internal springs provide fast retraction. Formed steel lids with bellows type gaskets keep the fluid in and the moisture out. Wilwood master cylinders use common dimensions for flange or side mounting and a 1/8-27 NPT outlet port.

# **Short Remote Master Cylinder Kit**

Wilwood's Compact Combination Master Cylinders have been designed for limited space applications requiring the output capacity of a full size master cylinder. The ultra short 3.37" compact body provides 2.16" of additional clearance between the mounting flange and the fluid outlet. A full 1.12" of piston stroke meets or exceeds the stroke capacity of most full size cylinders. With 1/8" NPT fluid outlet port located at the top radius of the cylinder bore, reduces the chances for trapped air. The black E-Coated aluminum body resists corrosion and maintains a durable long lasting finish.

### Inboard Clamp Kits

Wilwood's Sprint/Midget inboard hub and adapter kit provides a basis to bolt dynamic rotor mounting of standard 6 x 6.25" bolt pattern rotors. Also, a sprint inboard kit utilizing standard 8 x 7.00" bolt pattern rotors. All kits contain rotor adapter and dynamic rotor mounting bolt kit. Made from high strength aluminum. It provides a lightweight and strong solution for rotor mounting.

# Hi-Temp° 570 Brake Fluid

Wilwood's specially formulated Hi-Temp° 570 Racing Brake Fluid has a minimum 570° F. dry boiling point to withstand the severe heat requirements of automotive racing. Hi-Temp° 570's low viscosity allows easy bleeding of your brake system, eliminating aeration of the brake fluid caused by foaming due to excessive pumping of the pedal.

Hi-Temp° 570 comes in convenient 12 ounce containers hermetically sealed to guarantee against unwanted absorption of moisture which can drastically lower the fluids boiling point (fluid from larger containers tends to become contaminated with moisture, lowering its boiling point and making it unsuitable for racing applications).

### EXP 600 Brake Fluid

EXP 600 Plus is a highly refined blend developed for extreme performance under the high heat and extreme pressure of professional motorsports. EXP 600 Plus has tested to 626 degrees Fahrenheit with a wet boiling point of 417 degrees Fahrenheit. These numbers far exceed any DOT or SAE specifications.

It is true that racing fluids need to have high boiling points. It is also true that fluids need to have low moisture affinity to slow the natural absorption rate of water vapor. But the true test of any fluid is how well it resists aeration and compressibility after it has been heated and pressure cycled a few hundred times. The real test is at the track. EXP has been proven to maintain firm pedal feel and quick response, long after others have failed.

#### **Proportioning Valves**

These proportioning valves deliver precise pressure metering and unyielding strength from a compact and lightweight forged billet design Pressure adjustments range from 100-1000 PSI and provide for a maximum decrease of 57% in line pressure, the most of any available valve. This adjustment lets you fine tune the front to rear braking balance by proportionally decreasing the rear (or in some cases the front) brake line pressure. Can also be used to adjust individual front wheel braking in dirt track applications. Valves weigh only 5.2 ounces (knob), 6.1 ounces (lever), and have two .25" side mounting holes spaced 1.00" apart. Standard in and out ports are 1/8-27 NPT.

### **Residual Pressure Valve**

The two pound in-line residual pressure valve is used in disc brake applications where the master cylinder is mounted below the horizontal plane of the calipers and fluid drain back occurs from gravity and vibration, thereby causing excessive caliper piston retraction and a longer brake pedal stroke. The minimal two pound residual pressure prevents fluid from flowing back without causing the brakes to drag. Residual Pressure Valves are made from billet aluminum and color coded for easy identification.

#### **Brake Pressure Gauge**

This easy to read two inch diameter non-hazing face allows for quick brake line pressure checks from 0-1,500 PSI (or 0-10,000 kPa). 20 PSI graduations and accuracy to 1.5% permit reliable brake bias setup and brake system troubleshooting. It is durable and corrosion resistant.

#### Wilwood Race Wear

Wilwood has the race wear apparel you're looking for. Tee-shirts, long sleeve shirts, jackets, sweat shirts, baseball caps, etc.

For race wear ordering information, please give our Customer Service Department a call at (805) 388-1188. Or, e-mail Technical Assistance at: support@wilwood.com.

### **Disclaimer of Warranty**

Purchasers recognize and understand that racing parts and equipment, such as disc brakes, hubs, etc. and all parts, inventory and services manufactured and/or sold by Wilwood Engineering, Inc. are exposed to many and varied conditions due to the manner in which they are installed and used. Purchasers and Wilwood Engineering, Inc. consciously desire to make their own bargain, irrespective of any court decision and purchasers agree upon good faith and in consideration for being allowed to purchase from Wilwood Engineering, Inc. said parts or services. Purchasers expressly acknowledge and understand that Wilwood Engineering, Inc. does not make any affirmation of fact or promise to purchaser, which relates to said parts, inventory, or services that becomes part of the basis of the bargain between Wilwood Engineering, Inc. and purchasers. Nor does Wilwood Engineering, Inc. make, or cause to be made to purchaser any description of the goods sold to purchaser, nor does Wilwood Engineering, Inc. make, or cause to be made, as part of the basis of the bargain with purchasers, any description or affirmation of fact concerning any sample or model of racing parts, and equipment inventory or service.

As further consideration for purchasers using Wilwood Engineering, Inc. racing parts and equipment any and all inventory and services, purchasers acknowledge that due to the differing conditions and circumstances under which all equipment and parts are installed and used, purchasers are not relying on Wilwood Engineering, Inc. skill or judgement to select or furnish the proper part or equipment. Purchasers expressly affirm they are relying upon their own skill or judgement to select and purchase suitable goods.

Wilwood Engineering, Inc. makes no warranties whatsoever, expressed or implied, oral or written, to purchasers. There is no warranty of merchantability made to purchasers. Wilwood Engineering, Inc. further excludes any implied warranty of fitness with respect to racing and equipment, any and all inventory and service.

It is expressly understood and agreed between purchasers and Wilwood Engineering, Inc. that as part of the bargain between Wilwood Engineering, Inc. and purchasers, and in consideration of doing business with each other, all purchasers take, select and purchase said racing parts, equipment, any and all inventory, or services from Wilwood Engineering, Inc. "as is" and "with all faults" and Wilwood Engineering, Inc. shall always provide purchasers with a full and complete opportunity to examine, at purchasers' leisure and convenience, any racing parts and equipment, any and all inventory, or services when purchasing or contemplating purchasing from Wilwood Engineering, Inc.

If, and in the event that purchasers expressly or impliedly cause representations, or statements or affirmations of fact contrary to this disclaimer of all warranties, expressed or implied, then purchasers agree to indemnify and hold harmless Wilwood Engineering, Inc. in the event of any claim, demand, or legal action against Wilwood Engineering, Inc. by any purchaser.

Purchasers understand and agree that no officer, director, employee, or salesman of Wilwood Engineering, Inc. has any authority to make any statement contrary to the terms of this agreement. On the contrary, Wilwood Engineering, Inc. disavows any statement contrary to what is herein above written.

It is the responsibility of the person installing any brake component or kit to determine the suitability of the component or kit for that particular application. If you are not sure how to safely use this brake component or kit, you should not install or use it. Do not assume anything. Improperly installed or maintained brakes are dangerous. If you are not sure, get help or return the product. You may obtain additional information and technical support by calling Wilwood at (805) 388-1188, or visit our web site at <a href="https://www.wilwood.com">www.wilwood.com</a>. Use of Wilwood technical support does not guarantee proper installation. You, or the person who does the installation must know how to properly use this product. It is not possible over the phone to understand or foresee all the issues that might arise in your installation.

It is the responsibility of the purchaser and installer to determine suitability and correctness of fit for all fasteners and associated components supplied in any kit. Careful attention must be given to bolt size, thread pitch, bolt length and depth of engagement on every installation. Otherwise, component failure can occur.

Racing equipment and brakes must be maintained and should be checked regularly for fatigue, damage, and wear.

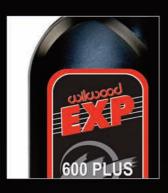

# WARNING • DO NOT DRIVE ON UNTESTED BRAKES BRAKES MUST BE TESTED AFTER INSTALLATION OR MAINTENANCE MINIMUM TEST PROCEDURE

- Make sure pedal is firm: Hold firm pressure on pedal for several minutes, it should remain in position without sinking.
   If pedal sinks toward floor, check system for fluid leaks. DO NOT drive vehicle if pedal does not stay firm or can be pushed to the floor with normal pressure.
- At very low speed (2-5 mph) apply brakes hard several times while turning steering from full left to full right, repeat several times. Remove the wheels and check that components are not touching, rubbing, or leaking.
- Carefully examine all brake components, brake lines, and fittings for leaks and interference.
- Make sure there is no interference with wheels or suspension components.
- Drive vehicle at low speed (15-20 mph) making moderate and hard stops. Brakes should feel normal and positive. Again check for leaks and interference.
- · Always test vehicle in a safe place where there is no danger to (or from) other people or vehicles.
- Always wear seat belts and make use of all safety equipment.
