

ACCEL

FROM RACE TO STREET AND STREET TO RACE

THE FIRST NAME IN ACCELERATION

For 30 years, ACCEL has been the leader in performance spark plug wire sets, ignition systems, and other performance parts designed to increase the horsepower and efficiency of your vehicle. New product development at ACCEL is extremely important. As a result, we are introducing new wire sets, coils, Engine Management products, starters, and a variety of other performance products to increase the horsepower and efficiency of your vehicle. Additionally, we have been improving the look and design of our packaging and advertising.

Performance spark plug wire sets have long been associated with ACCEL. We are the largest aftermarket performance spark plug wire company. We not only engineer and design our spark plug wire sets, but we also manufacture them (which many other aftermarket companies do not). Additionally, our manufacturing plant is ISO 9001 certified, meaning you can be assured that it is produced to the highest quality

standards to exceed your expectations. We also manufacture our own ignition systems and fuel injection ECUs in our ISO 9001 certified facilities.

Aftermarket Engine Management was pioneered by ACCEL/DFI. Our commitment to programmable fuel injection has led to the development of a network of over 100 EMIC (Engine Management Installation Centers) whose purpose is to install and calibrate ACCEL/DFI fuel injection systems on your vehicle in order to make it easier for you to enjoy your ACCEL/DFI Engine Management system.

ACCEL continues to post the highest racing contingency of any performance ignition and fuel management company. Thanks for your continuing support of ACCEL Performance Products.

Shown on the cover is the ACCEL SuperRam, a high performance, tuned-port fuel injection system that provides more horsepower and torque than OEM systems. It supports power up to 6500 RPM while improving overall vehicle performance — driveability, throttle response and fuel economy. See page 231 for complete application information.

Performance Group

The Mr. Gasket Performance Group offers a wide variety of Performance and Custom products, marketed under many well-known brand names including ACCEL, Lakewood Industries, Hays Clutches, Hurst Performance and Mallory Ignition.

MR. GASKET

Mr. Gasket markets a wide variety of performance and custom products including gaskets, fasteners, chrome plated dress-up accessories, engine, carburetor and fuel system components, electric fans and cooling system accessories, and a wide range of related products.

ACCEL

ACCEL manufactures a wide range of performance ignition products including digital ignition systems, coils, ignition wires, spark plugs, fuel injection systems, components, and a complete line of caps, rotors and ignition parts.

LAKWOOD INDUSTRIES

Lakewood Industries makes safety and suspension products, including hydroformed bellhousings, traction bars, drag shocks and related accessories.

HAYS CLUTCHES

Hays Clutches products include performance and racing pressure plates, discs, flywheels, kits and accessories. Hays also has a complete line of custom-built specialty clutches for drag racing and tractor-pulling applications.

HURST

Hurst Performance is the leading manufacturer of performance and racing shifters, which includes the legendary Competition/Plus and the Billet/Plus manual shifters, and a complete line of automatic shifters including the Quarter Stick and Pro-Matic 2.

MALLORY IGNITION

Mallory Ignition manufactures a complete line of performance and racing ignition systems including distributors, magnetos, ignition wire, systems, and a complete line of caps, rotors and ignition parts.

ERSON CAMS

Erson Cams manufacture a wide variety of performance and racing camshafts, roller rocker arms and valve train components.

LOCAL DEALER

To find your local Mr. Gasket Performance Group dealer, call 1-800-542-2235 or look in the Yellow Pages under Automobile - Performance, Racing & Sports Car Equipment.

INTERNET

The Mr. Gasket Performance Group has an extensive internet presence, which includes new product listings, product catalogs, consumer events, race schedules, tech tips, and a whole lot more.

Check out the Mr. Gasket web site at www.mrgasket.com today!

PROFESSIONAL DRAG RACE II CD COIL IMPROVED - HIGHER ENERGY, LONGER ENDURANCE

Re-engineered for extended use and ultra high output. This coil is capable of delivering over 1 full amp to the spark plugs. Design to work with CD racing ignition systems only. The unique patent pending core design and ultra low resistance heavy gauge windings have been designed for optimal performance with a Mallory, Crane, Holley or MSD capacitive discharge racing ignition system. Special high temperature, high density epoxy encapsulation resists severe shock and harsh vibration while providing maximum thermal conductivity. The light weight anodized extruded aluminum housing provides maximum cooling. SAE male tower with three high voltage dams provides extended protection from arcing. Can be mounted in any orientation and comes complete with a sealed weatherproof primary leads and connector. This coil is effective to over 12,000 RPM.

SPECIFICATIONS

Tested with Mallory HyFire VII ignition

Primary Resistance	0.09 Ohms
Secondary Resistance	0.48 Ohms
Turns Ratio	170 : 1
Maximum Voltage	50,000 volts
Peak Current	1,200 mA
Spark Duration	170 μ S

Professional
 Drag Race II CD coil 140010

See page 77 for ACCEL distributor application and pages 128-139 for additional coils.

new

HEAVY DUTY CD ONLY E-CORE SUPER COIL

Professional continuous use racing coil specifically design to work with CD ignition systems only. High energy, heavy gauge windings designed especially for optimum performance with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. E-core design minimizes inductance losses and maximizes energy output. Special high temperature epoxy resists shock and vibration and provides excellent thermal conductivity. The extruded aluminum heat sink provides maximum cooling to ensure long life. SAE male tower offers greater coil wire retention and protection from arcing. Comes complete with insulated primary wire connector and universal ACCEL 8.8mm 300+ Race Wire coil lead and mounting hardware kit. This coil is effective to over 10,000 RPM.

SPECIFICATIONS

Tested with ACCEL 300+ Ignition

Primary Resistance	0.2 Ohms
Secondary Resistance	3.6 k Ohms
Turns Ratio	95 : 1
Maximum Voltage	48,000 volts
Peak Current	300 mA
Spark Duration	360 μs

Heavy Duty CD only
E-core Super Coil140019

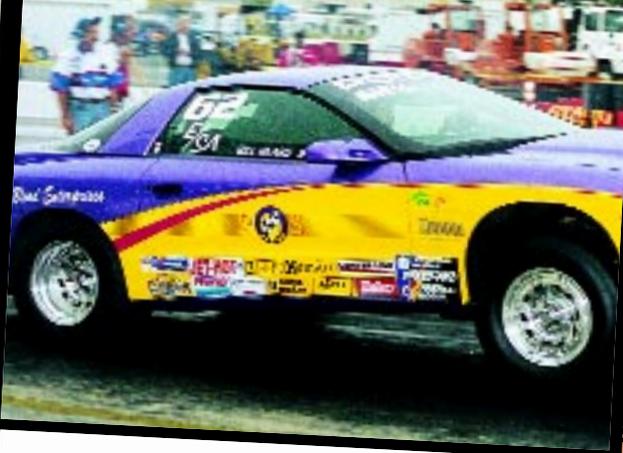

SHOCK /VIBRATION MOUNT KIT

- Recommended for racing applications with severe shock and vibration conditions.
- Four 1/4-20 studs impregnated in high absorption rubber cushions provide effective vibration isolation to protect valuable racing electronics.
- Complete with hex nuts and lockwashers.

300+ IGNITION

The 300+ ignition system was designed to be the most compact, lightest, most powerful and most reliable ignition system available. Fully epoxy encapsulated for water and vibration resistance, the 300+ was designed to perform in extremely demanding environments. The 300+ has the lowest operating current draw, and supplies the highest energy into the coil when compared to other ignition systems in its class. The 300+ also features an integral rev limiter which can easily be changed with rotary dial-no need to use removable chips! Reliability is unsurpassed with the microprocessor controlled, fully epoxy encapsulated design!

LISTEN TO WHAT THE WINNERS HAVE TO SAY:

John Lingenfelter:

"The ACCEL 300+ system is a reliable ignition system which is not only smaller and lighter, but more importantly, it produces tremendous spark energy, 25% more than the nearest competitor. We installed a ACCEL 300+ system on the 1997 Hurst Firebird, put several thousand miles on it and even drove it on the Hot Rod Powertour with no failures. The ACCEL 300+ is an extremely reliable piece."

Abraham Bergian

Associate editor of High Tech Performance magazine:

"With the ACCEL 300+ system installed on our 1996 Pontiac Firebird Formula project car, we picked up 30 more miles per tankful. The ACCEL 300+ system made the Formula more efficient all the way around."

Evan Smith

Technical editor for Muscle Mustangs & Fast Fords:

"As a whole, ACCEL's 300+ system gets a thumbs up. We like the modular design, the ease of installation, and the fact that it works. We were more than impressed with a gain of 14 horsepower (when combined with ACCEL 300+ Race Wires and a 60201M BilleTech distributor) at the rear wheels. We expected only a 5-8 HP improvement."

IGNITION SYSTEMS

IGNITION SYSTEMS

IGNITION SYSTEMS

ACCEL 200+ IGNITION AMPLIFIER

Designed to work with breakerless electronic distributors, the ACCEL 200+ ignition amplifier unlocks the full energy potential of your ignition system by producing a 50% higher coil current density than stock systems at higher RPMs. The 200+ boosts the primary voltage to the ignition coil, resulting in increased coil saturation and energy at the spark plug by as much as 300%! The result? More horsepower, better fuel economy, and reduced HCs and Co emissions. What's more, it places no additional load on the coil at idle to prevent overheating. Then as engine load and RPMs increase, the 200+ boosts the primary voltage from 12 volts up to 18 volts at 3500 RPMs.

And for your peace of mind, a failure-safe or limp-home mode has been integrated into the 200+ system. This allows you to reach your destination without complete loss of your ignition system.

The 200+ is designed for maximum performance and convenience - combining unmatched reliability and durability with a lightweight, compact and waterproof design. And, the supplied custom-fit harness provides a simple plug-in installation, typically in less than thirty minutes. For most late model applications.

WIRE SETS

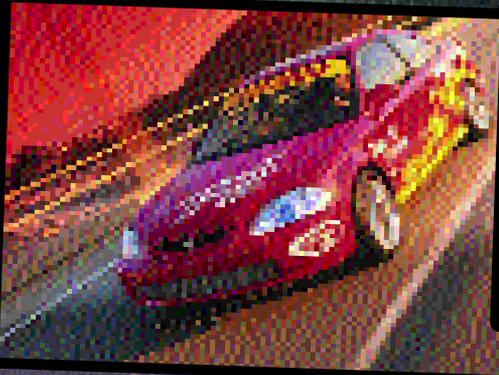

300+ RACE WIRE

300+ RACE WIRE

- Applications:** Race engine configurations
- Features:** Silicone spark plug boots, black wire, stainless steel spark plug terminals
- Benefits:** Maximum energy to spark plug, heaviest gauge conductor in the industry, 8.8mm oversized racing wire, complete suppression of EMI/RFI (radio noise)
- Construction:** 8.8 mm, 600° F double silicone construction with a fiberglass braid
- Core:** HD gauge spiral wound copper/nickel alloy conductor, magnetic suppression & fully reactive ferrite material, all Kevlar core, 150 Ohms per foot resistance

WIRE SETS

300PLUS THUNDERSPORT

300plus THUNDERSPORT

- Applications:** True race wire for street/strip use, sport compact vehicle coverage
- Features:** 8 mm oversized ultra performance wire, exact match OE-type spark plug boots, high gloss blue, red & yellow wire, stainless steel spark plug terminals
- Benefits:** Maximum energy to spark plug, sport compact vehicle coverage, complete suppression of EMI/RFI
- Construction:** 8mm, 550° F double silicone construction with a fiberglass braid
- Core:** HD gauge spiral wound copper/nickel alloy conductor, magnetic suppression & fully reactive ferrite material, all Kevlar core, 150 Ohms per foot resistance

WIRE SETS

EXTREME 9000

EXTREME 9000

- Applications:** HD truck, towing, turbo or headers
- Features:** Heat-reflective coated silicone spark plug boots, black wire, stainless steel spark plug terminals
- Benefits:** HD high temperature application coverage, oversized upgrade where OE is 7mm, true performance upgrade, increased ignition energy due to lower resistance, complete suppression of EMI/RFI
- Construction:** 8mm, 600° F double silicone construction with a fiberglass braid
- Core:** Spiral wound copper/nickel alloy conductor, magnetic suppression & fully reactive ferrite material, all Kevlar core, 500 Ohms per foot resistance

WIRE SETS

8.8mm SPIRAL

- Applications: Performance street/strip
Features: 8.8mm oversized wire, oversized 8.8mm silicone spark plug boots, high gloss yellow wire, stainless steel spark plug terminals
Benefits: True performance upgrade, increased ignition energy due to lower resistance
Construction: 8.8mm, 550° F double silicone construction with a fiberglass braid
Core: Spiral wound stainless steel alloy conductor, magnetic suppression, semi-reactive material, fiberglass/Kevlar core, 500 Ohms per foot resistance, also available with carbon/graphite or stainless steel core

8mm SUPERSTOCK SPIRAL

- Applications: Late model car & truck coverage
Features: Color-matched silicone spark plug boots, high gloss blue, black, red & yellow wire, stainless steel spark plug terminals
Benefits: True performance upgrade, increased ignition energy due to lower resistance, oversized upgrade where OE is 7mm
Construction: 8mm, 550° F double silicone construction with a fiberglass braid
Core: Spiral wound stainless steel alloy conductor, magnetic suppression & semi-reactive material, fiberglass/Kevlar core, 500 Ohms per foot resistance

ARMORSHIELD

- Applications: Braided custom "Hot Rod" look
Features: Silicone spark plug boots, yellow & blue silicone wire, Zinc-plated steel spark plug terminals
Benefits: Efficient transmitter of ignition energy, oversized upgrade where OE is 7mm
Construction: 8mm, 450° F metallic braided sleeving, silicone & EPDM rubber construction with a fiberglass braid
Core: Carbon/graphite conductive material, high resistance suppression, fiberglass/Kevlar core, 3000-7000 Ohms per foot resistance

SUPERSTOCK

- Applications: Performance upgrade to OE-type/ replacement-type
Features: Silicone spark plug boots, yellow, blue, red, & black silicone wire, zinc-plated steel spark plug terminals
Benefits: Efficient transmitter of ignition energy, popular priced performance, oversized upgrade where OE is 7mm
Construction: 7 & 8mm, 450° F silicone & EPDM rubber construction with a fiberglass braid
Core: Carbon/graphite conductive material, high resistance suppression, fiberglass/Kevlar, 3000-7000 Ohms per foot resistance, also available with tinned copper core

WARREN JOHNSON

ACCEL 8.8 300+ RACE WIRE

ACCEL's 300+ FERRO-SPIRAL™ RACE WIRE sets feature a technologically advanced race-winning ignition wire. The design centers around the industry's heaviest gauge copper-nickel alloy conductor, spiral-wound around a fully reactive ferrite impregnated all Kevlar® stranded inner core with a resistance of only 150 Ohms/foot. The combination of extremely low resistance and heavy gauge conductor ensures that both maximum voltage and amperage reach the spark plug. This generates performance you can both see and feel in a smoother running engine with quicker throttle response, faster acceleration.

Because ACCEL's 300+ FERRO-SPIRAL™ RACE WIRE uses the heaviest gauge spiral-wound alloy in the industry, it can deliver 160% more amperage than our closest competitor! You wouldn't run an arc welder off a lamp cord, so don't let your spark plug wires be the weak link in your high performance ignition system. Insist on ACCEL 300+ Ferro-Spiral™ Race Wire.

ACCEL the first name in ACCELERation!

"ACCEL 300+ Race Wire makes more power than any other plug wire."

— Warren Johnson, NHRA Pro Stock Champion

"ACCEL 300+ Race Wire tested best on my dyno."

— David Nickens

"ACCEL 300+ Race Wire gave me .05 secs and over 2-1/2 mph. And no problems with our electronics."

— Rod Saboury

"ACCEL 300+ may not mean 300 mph, but is was good enough for 6.988, first Pro Stock in the 6's."

— Kurt Johnson

"ACCEL 300+ Race Wire made more horse power on Jon Kaase's dyno than any other wire."

— Roy Hill

"ACCEL 300+ Race Wire is the only wire I will use on my race engines. When we run ACCEL 300+ RaceWire, we know we are running the best wire available and we never have to worry about problems with our wires."

— John Lingenfelter

"ACCEL 300+ Race wires even worked with the new magnetos on our Top Fuel Dragster."

— Anonymous Crew Chief with a competitor's contingency sponsorship.

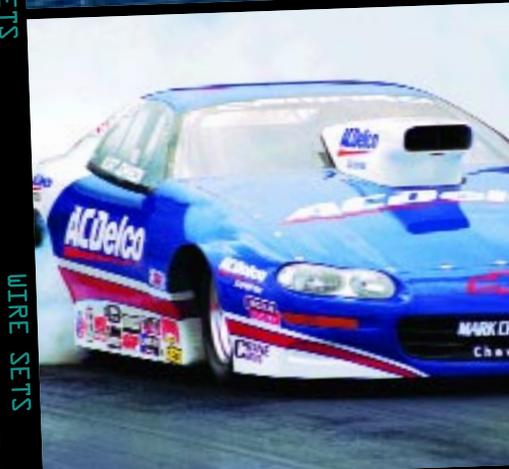

All these guys have one thing in common. If your parts don't work, they won't use them. Period.

ROY HILL

WIRE SETS

**ACCEL 300+ FERRO-SPIRAL™ RACE WIRE
CUSTOM TAILORED SETS FOR RACE
ENGINES AND ENGINE BUILDERS**

The oversized 8.8mm wire features a double silicone construction rated at over 600°F and 60kV. The high gloss black silicone wire jacket not only looks great, but resists heat extremes, petrochemicals, ozone and moisture better than so-called blended materials for greater durability and longer life. The high-density, high-temperature silicone insulation provides greater dielectric strength and eliminates arcing and the effects of corona better than the typical OE style rubber materials. The all-Kevlar stranded inner core and fiberglass braiding adds greater pull strength and terminal retention. The stainless steel and brass terminals provide unsurpassed electrical conductivity and excellent corrosion resistance compared to terminals made of common or plated metals.

ACCEL offers 300+ FERRO-SPIRAL™ RACE WIRE sets that are custom tailored for race engines. These sets feature all the benefits of the custom fit sets plus they have been specifically designed to fit race engines equipped with racing distributors and headers. These sets have been designed with custom wire lengths to route the wire either over the valve covers or down the back of the engine block and under the headers, helping keep the wires from being damaged by the heat of the exhaust system. Some wire sets feature ACCEL Pro-Sleeving with heat shrink tubing to provide even greater protection from heat, abrasion and flying debris. Each wire set comes with an extra long, non-sleeved, universal coil lead and boot / terminal kit that allows you to tailor it for your specific setup.

ACCEL 8.8 300+ FERRO-SPIRAL™ RACE WIRE VS. THE OTHER GUY'S 50 OHMS/FT WIRE

ACCEL	THEM
8.8mm construction	7mm, 8mm or 8.5mm construction
High gloss 600 F peak silicone jacket	Dull 500 F peak blended synthetic rubber /silicone (Cosil) jacket
Fiberglass braid	Fiberglass braid
Ultra-high temperature high dielectric strength silicone insulator	High temperature high dielectric strength blended Cosil insulator
34 gage Cu / Ni alloy conductor 160% greater amperage capacity	36 gage Cu / Ni alloy conductor
80 turns per inch 50% core coverage More consistent core	144 turns per inch 72% core coverage So tightly packed, windings can touch
100% Kevlar core stranding Greater wire strength	100% fiberglass core stranding or a mix of Kevlar/fiberglass stranding
Ferrite magnetic RFI suppression	Ferrite magnetic RFI suppression
150 Ohms/ft resistance	50 Ohms/ft resistance lower resistance

OKAY, THE OTHER GUY HAS A LOWER RESISTANCE WIRE, BUT WHAT DOES THAT ACTUALLY MEAN?

Let's look at Ohm's Law: Voltage loss = Amperage x Resistance

The typical CD racing ignition system with a drag race is designed to deliver approximately 55,000 volts and 1 amp to the spark plug. The average spark plug lead is about 3 feet long, so:

ACCEL 300+ Ferro-Spiral™ voltage loss is then:	$1 \text{ amp} \times (3 \text{ feet} \times 150 \text{ Ohms/foot}) = 450 \text{ voltage loss}$ $(450/55,000) \times 100\% = 0.8\%$
The other guy's 50 Ohm/ft voltage loss is then:	$1 \text{ amp} \times (3 \text{ feet} \times 50 \text{ Ohms/foot}) = 150 \text{ voltage loss}$ $(150/55,000) \times 100\% = 0.3\%$

This difference is minimal. It is true that the higher the voltage, the wider the spark plug gap can be set. But the difference illustrated here, between 54,850 volts and 54,550 volts is indistinguishable.

For reference OEM carbon/graphite core is about 4,500 Ohms/ft, its voltage loss is then:

OEM carbon/graphite core:	$1 \text{ amp} \times (3 \text{ feet} \times 4,500 \text{ Ohms/foot}) = 13,500 \text{ voltage loss}$ $(13,500/55,000) \times 100\% = 24.6\%$
---------------------------	---

THAT'S WHY YOU NEED A HIGH PERFORMANCE RACING SPIRAL CORE IGNITION WIRE!

Voltage is potential. Higher voltage allows a wider gap to expose more of the mixture to the flame kernel. Combustion is a chemical reaction. Voltage does not add chemical energy to the combustion process. Amperage is current, measured in units of heat. The more amperage delivered to the spark plug, the faster combustion will start resulting in more complete combustion.

ACCEL'S 300+ FERRO-SPIRAL™ RACE WIRE CAN DELIVER 160% MORE AMPERAGE TO THE SPARK PLUG THAN THE OTHER GUY'S 50 OHMS/FT WIRE.

WHAT DOES THAT MEAN TO YOU?

We had two NHRA Pro-Stock teams dyno test both of these wires on their 1300+ hp mule motors equipped with MSD 7AL-3 boxes and Pro Power™ coils. In back to back testing, ACCEL 300+ Ferro-Spiral™ Race Wire produced 14 more horse power than the other guy's 50 Ohms/ft wire, with no other changes! When a prominent NASCAR engine builder did back to back dyno testing on his 750 hp Winston Cup motor he found 7 hp more with ACCEL 300+ Ferro-Spiral™ compared to the other guy's 50 Ohms/ft wire, with no other changes!

THOSE TEST RESULTS SPEAK FOR THEMSELVES. WHO HAS THE BEST PERFORMANCE & RACING WIRE? ACCEL 300+ FERRO-SPIRAL™ RACE WIRE.

WIRE SETS

- HIGH-GLOSS YELLOW, BLUE OR RED DOUBLE SILICONE WIRE CONSTRUCTION RATED AT OVER 550°F AND 60KV

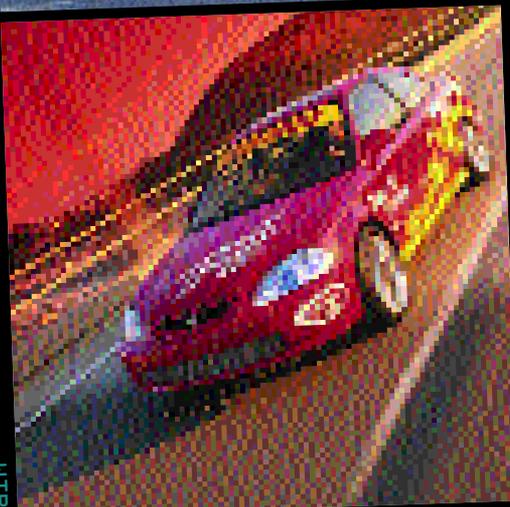

- PRECISION-MOLDED SILICONE SPARK PLUG BOOTS - NO UNIVERSAL ONE-SIZE-FITS-

MAXIMUM PERFORMANCE FOR SPORT COMPACTS ON AND OFF THE TRACK WITH ACCEL'S 300plus THUNDERSPORT ULTRA PERFORMANCE WIRES!

ACCEL's 300plus ThunderSport™ Ferro-Spiral™ Ultra Performance Wire Sets feature a technologically advanced race-winning ignition wire. The design centers around the industry's heaviest gauge copper-nickel alloy conductor, spiral-wound around a fully reactive ferrite impregnated all- Kevlar® stranded inner core with a resistance of only 150 Ohms/foot. The combination of extremely low resistance and heavy gauge conductor ensures that both maximum voltage and amperage reach the spark plug. This generates performance you can both see and feel in a smoother running engine with quicker throttle response, faster acceleration, improved fuel economy and reduced HC and CO emissions.

Because ACCEL's 300plus ThunderSport wire uses the heaviest gauge spiral-wound alloy in the industry, it can deliver 160% more amperage than our closest competitor and up to 640% more amperage than an OE style spiral core wire! You wouldn't run an arc welder off a lamp cord, so don't let your spark plug wires be the weak link in your high performance ignition system. Insist on ACCEL 300plus ThunderSport Ferro-Spiral Ultra Performance spark plug wires. ACCEL the first name in ACCEleration!

The oversized 8mm wire features a double silicone construction rated at over 550°F and 60kV. The high gloss silicone wire jacket not only looks great, but resists heat extremes, petrochemicals, ozone and moisture better than so-called blended materials for greater durability and longer life. The high-density, high-temperature silicone insulation provides greater dielectric strength and eliminates arcing and the effects of corona better than the typical OE style rubber materials. The all-Kevlar stranded inner core and fiberglass braiding adds greater pull strength and terminal retention. The stainless steel and brass terminals provide unsurpassed electrical conductivity and excellent corrosion resistance compared to terminals made of common or plated metals. The precision-molded spark plug boots are a one-piece silicone design or a multi-piece assembly, that fits your specific

engine exactly; no one-size-fits-all universal substitutes!

Lower spark plug wire resistance allows more voltage to reach the spark plug exposing more air/fuel mixture to the flame kernel. OE style spark plug wires have a resistance of 4,500 Ohms/foot which result in 30 times more voltage loss than ACCEL's 300plus ThunderSport Ferro-Spiral Ultra Performance wire sets. Don't be fooled by other's claims that lower resistance alone will generate higher performance.

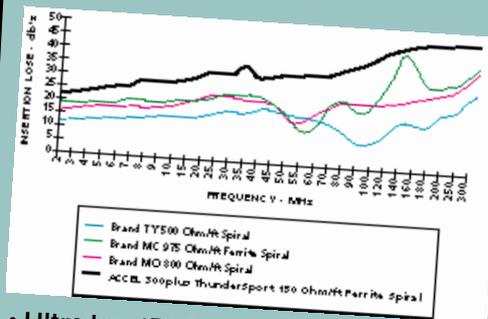

A typical high performance multi-strike, capacitive discharge ignition system like ACCEL's 300+ Digital Performance Ignition delivers approximately 55,000 Volts and 0.75 Amps. You must use a high performance wire set to get all that extra energy to the spark plug. Why? Ohm's Law states: Voltage loss = Amperage x Resistance. If you are using OE type spark plug wires with too much resistance, all that extra energy simply can't reach the spark plug! See the chart below.

The combustion of the air/fuel mixture is a chemical reaction. Voltage alone does not add chemical energy to the combustion process. Amperage is defined in measurement units of heat. The more amperage you deliver to the spark plug, the hotter and longer lasting the spark flame kernel will be, resulting in a faster and more complete combustion process. In other words, higher performance through improved efficiency.

The physical and electrical characteristics of this revolutionary fully reactive Ferro-Spiral core act to eliminate EMI/RFI radiation (radio noise or static). ACCEL's advanced design offers unsurpassed EMI/RFI suppression across a wide band of the electromagnetic field, so it doesn't affect any electronic equipment in your vehicle. See chart at right.

C.I.S.P.R. BOX TEST PERFORMED BY ELITE ELECTRONIC ENGINEERING CO.

- Ultra low 150 OHMS/foot resistance and heaviest gauge copper-nickel alloy conductor in the industry guarantees maximum voltage potential and amperage to the spark plugs
- All Kevlar/Fully reactive Ferro-Spiral core eliminates EMI/RFI and maximizes ignition energy to the spark plugs

RESISTANCE PER FOOT	TYPICAL HIGH PERFORMANCE CD IGNITION SYSTEM OUTPUT	SPARK PLUG LEAD LENGTH	VOLTAGE LOSS = AMPERAGE x RESISTANCE
OE WIRE			
4,500 Ohms/foot	55,000 Volts and 0.75 Amps	2 feet	0.75 Amps X 2 feet X 4,500 Ohms/ft = 6,750 Volts 6,750 Volts lost / 55,000 Volts potential = 12.3% 12.3% VOLTAGE LOSS
ACCEL 300PLUS THUNDERSPORT			
ONLY 150 Ohms/foot	55,000 Volts and 0.75 Amps	2 feet	0.75 Amps X 2 feet X 150 Ohms/ft = 225 Volts 225 Volts lost / 55,000 Volts potential = 0.4% ONLY 0.4% VOLTAGE LOSS!

FROM THE SAME PEOPLE WHO BROUGHT YOU DFI ACCEL THE FIRST NAME IN ACCELERATION!

Available in B - blue, R - red or Y - yellow wire colors for late model Acura, Honda, Mazda, Mitsubishi, Nissan, Neon, and Saturn vehicles - see chart below!

ACCEL 300PLUS THUNDERSPORT UNIVERSAL COIL LEADS

Designed to be used when converting Honda/Acura to an external coil ignition system. Each kit features a 42" ACCEL 300+ ThunderSport lead in your choice of three wire jacket colors; Blue, Red and Yellow. The kit also includes distributor/coil boots and terminals for both male tower and female socket style coil applications.

- ACCEL 300plus ThunderSport Blue Universal Coil Lead kit.....7990B
- ACCEL 300plus ThunderSport Red Universal Coil Lead kit7990R
- ACCEL 300plus ThunderSport Yellow Universal Coil Lead kit7990Y

ACCEL EXTREME 9000 FERRO-SPIRAL™ HEAT REFLECTIVE WIRE SETS

ACCEL Extreme 9000™ Ferro-Spiral™ Heat Reflective technology is a break through in applying aerospace material science to automotive products. This ultra high temperature barrier acts as a heat mirror, reflecting the infra-red energy or heat away from the spark plug boot. This is critical in highly stresses, heavy duty, and super or turbo charged engines.

During towing, stop and go traffic and heavy load conditions, the exhaust manifolds on your vehicle can literally glow cherry red. In today's cramped engine compartments, this can be certain death for OEM type ignition wire sets. In side by side chassis dyno testing, two identical spark plug boots were installed, one protected by ACCEL's Extreme 9000™ heat reflective technology and the other was not. Both boots had a 1/2" air gap clearance with the exhaust manifold. With the engine under load, the exhaust manifolds reached 1000° F. The unprotected spark plug boot began burning in only 9 minutes. After 12 minutes the unprotected spark plug boot had reached an internal temperature of 680° F, began arcing, resulting in engine misfire. While the spark plug boot protected with ACCEL's Extreme 9000™ heat reflective coating, internal temperature never exceeded 430° F. Even after 2 hours of continuous abuse. That a reduction of over 250° F!

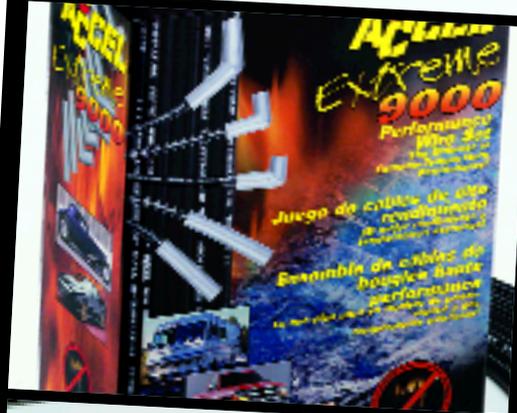

The ACCEL's Extreme 9000™ heat reflective coating may look like silver spray paint, IT'S NOT!

It is a multi step patented process using patented materials. It does not rub, flake or peel off and is rated to 1200° F. It is permanently bonded to the silicone spark plug boot and stays as flexible as the spark plug boot itself. This is especially important for applications where the spark plug boot may have to be bent during installation. The ACCEL's Extreme 9000™ heat reflective coating has been applied to FIVE different styles of spark plug boots to match almost all engine configuration.

The ACCEL's Extreme 9000™ wire set have an ultra high temperature double silicone construction wire rated at 600° F peak. The wire uses a new technology 500 Ohms/ft Ferro-Spiral™ core developed for street performance use. It provides excellent energy delivery to the spark plugs, while providing the highest level of RFI/EMI (radio noise) suppression. The ACCEL's Extreme 9000™ wire sets also feature stainless steel spark plug terminals.

The ACCEL's Extreme 9000™ heat reflective coated spark plug boots are not flame proof! Nothing, not even ceramic spark plug boots can withstand direct contact with the exhaust manifolds or headers.

EXTREME 9000

WIRE SETS

WIRE SETS

WIRE SETS

WIRE SETS

WIRE SETS

8mm ARMOR SHIELD

(SEE APPLICATION CHART PAGES 27-76)

Our metallic braided ignition wire delivers maximum spark energy while providing a Pro Street look. Armor Shield Wire sets enhance the appearance of braided fuel lines and coolant hoses.

- 8000 Series, 8mm, 450°F-rated.
- Pro-street applications.
- 8mm yellow, blue silicone jacket with braided Armor shielding.
- Carbon/graphite core; silicone insulation and fiberglass braid.
- Orange and color matched blue silicone boots.
- Pre and post HEI applications.
- Custom-fit and universal.

8.8mm WIRE

(SEE APPLICATION CHART PAGES 27-76)

ACCEL's 8.8Wire is available in three conductor versions, each providing maximum conductivity for the ultimate performance in any race or street application. Extra-thick 8.8mm double silicone insulation and heavy silicone boots eliminate electrical leakage and misfire.

- 8000, 8800, & 8900 Series, 550°F-rated.
- 8.8mm yellow high temperature silicone jacket.
- Race & Street-driven applications.
- Stainless steel core designed for demanding race conditions.
- Spiral Core 500 Ohms/foot RFI-suppression for street/strip.
- Graphite RFI-suppression virtually eliminates "noise".
- High temperature, extra large bright red silicone insulated boots.
- Pre and post HEI applications.
- Custom-fit, universal & import.

8mm SUPERSTOCK SPIRAL WIRE SETS

ACCEL announces a color offering expansion of the 8mm SuperStock Spiral wire set product line. The traditional ACCEL combination of yellow wire and red spark plug boots has been added to the existing SuperStock Spiral product line which features color matched wire and spark plug boots in blue, black and red. And with only 500 Ohms/foot of resistance, more ignition energy can reach the spark plug, producing a hotter, longer-lasting spark flame kernel. The result is higher performance through improved efficiency, quicker throttle response and reduced emissions. This 8mm wire's double silicone construction is rated to 550° F. The high gross wire jacket resists moisture, chemicals and heat extremes for longer life and great looks. The fiberglass braid adds greater pull strength and terminal retention, while the stainless steel spark plug terminals provide excellent long life, electrical conductivity and corrosion resistance.

Both universal and custom fit applications are available for early and late model cars and trucks.

- 5000 Series, 8mm, 500°F-rated.
- Street-driven applications.
- 8mm red, blue, black or now yellow high temperature silicone jacket resists moisture, chemicals and severe temperatures.
- High-strength fiberglass braid for added "pull strength", silicone insulation eliminates arcing.
- Stainless steel plug terminals for high electrical conductivity and corrosion resistance.
- Pre and post HEI applications.
- Custom-fit and universal.

ACCEL WIRE SETS ARE ENGINEERED FOR PEAK PERFORMANCE

For almost 30 years ACCEL has developed specialized high performance ignition systems and components for professional racing. Our racing experience has led to the development of wire sets that are built at our own wire facilities and designed to deliver maximum spark energy. All ACCEL Custom-Fit Wire Sets are factory terminated and ready to install for an original equipment fit.

SUPERSTOCK

(SEE APPLICATION CHART PAGES 27-76)

Our SuperStock Wire is designed to upgrade an OE ignition system for high spark delivery levels for street-driven applications. The 450°F-rated silicone jacket is extruded over a tightly woven, rugged fiberglass braid which is applied over a high dielectric strength EPDM (Ethylene Propylene Diene Monomer) inner insulation for ignition wire performance that exceeds SAE specifications.

4000 SERIES

- 8mm yellow, red, black & blue silicone jacket.
- Street-driven applications.
- Fiberglass braid EPDM insulation.
- Orange and color matched blue, red & black silicone spark plug boots.
- Pre and post HEI vehicles.
- Custom Fit, Universal & Import.

3000 SERIES

- 7mm yellow, blue silicone jacket.
- Street-driven applications.
- Graphite RFI Suppression or Copper Core.
- Orange and color matched blue silicone spark plug boots.
- Pre HEI vehicles.
- Universal Fit.

COMPETITION SEPARATOR KIT

- For racing or street use where extreme high temperatures causes normal materials to literally sag or melt.
- Glass fiber reinforced high temperature polymer rated to 400 F.
- Includes 2-4 wire separators, 2-3 wire separators and 2-2 wire separators.
- Sized for 8mm wire, available in four colors.

Blue	170019
Red	170020
Yellow	170021
Black	170022

COMPETITION WIRE LOOM KIT

- For racing or street use.
- Includes 2- 4 wire looms, 2-3 wire looms, 4-2 wire separators, and 4 sturdy chrome-plated steel loom brackets.
- Attaches at intake manifold or valve cover bolts with unique universal bracket bushing.

Competition Wire Loom Kit	7mm-8mm	170056
	8.8mm-9mm	170068

COMPETITION VALVE COVER MOUNTED LOOM KIT

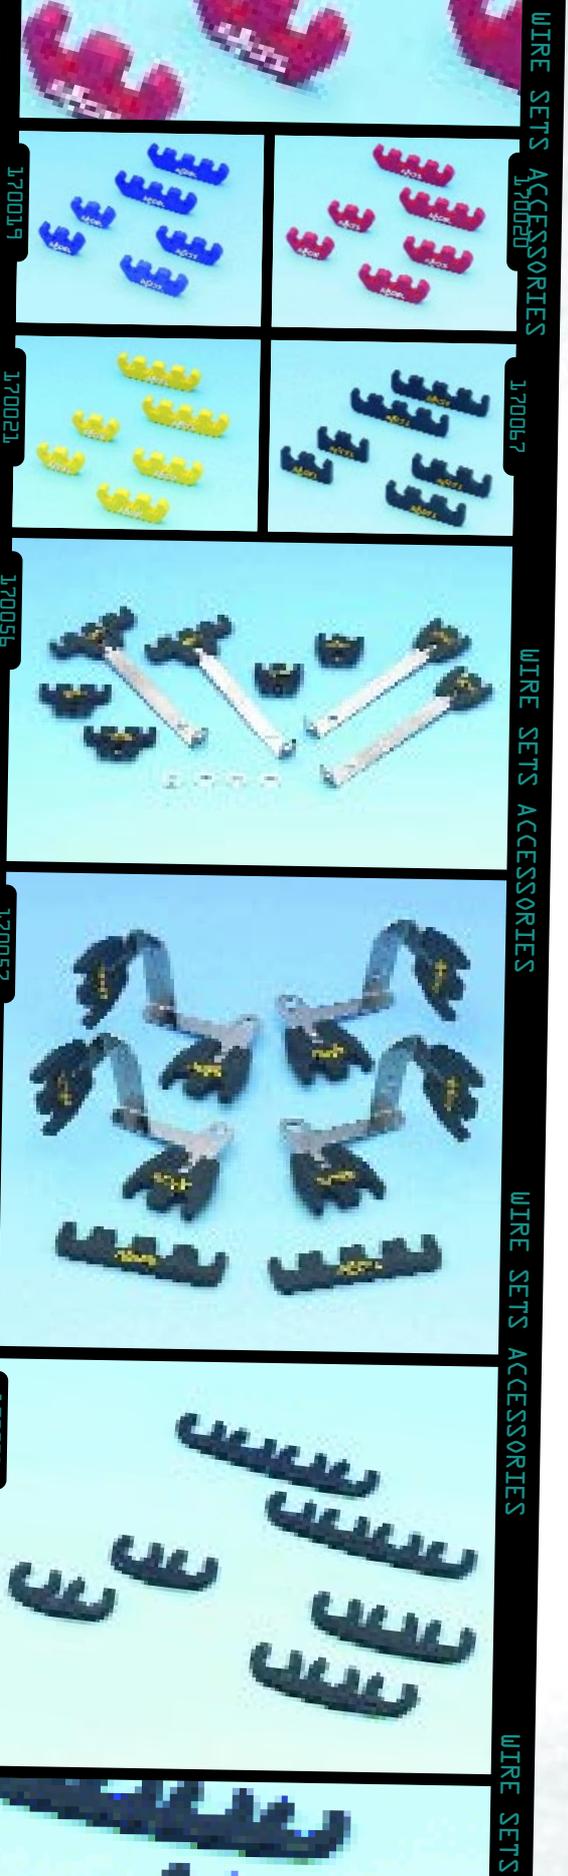

- For racing or street use.
- Includes 2-4 wire separators, 8-2 wire looms, and 4 valve cover mounted dual loom brackets.
- Specially designed for small block Chevrolets, but will also fit other engines.

Competition Valve		
Cover Mounted Loom Kit	7mm-8mm	170057
	8.8mm-9mm	170069

SEPARATOR KITS

- Least expensive, injection molded set of wire dividers keep ignition wires separated.
- Kits available for 7mm and for 8, 8.8, 9mm wire.

WIRE SEPARATOR KIT	WIRE SIZE	PART NO.
Competition Separator Kit	7mm-8mm	170055
	8.8mm-9mm	170067
Economy Separator Kit	7mm	170030
	8, 8.8, 9mm	170031

WIRE SETS ACCESSORIES

170071

PRO SLEEVE

- Bright yellow silicone impregnated fiberglass braid slips over ACCEL 8.8 Ignition Wire for extra voltage, abrasion and temperature protection.
- Used with 170080 Pro Tape for best results.

25 Ft. Spool for 8.8mm, 9mm Ignition Wire 170071

170081

PRO TAPE

- Non-adhesive, self-vulcanizing silicone tape actually bonds itself to silicone boots and wire jacket for perfect seal.
- Provides extra heat protection, moisture-proofing, and helps prevent voltage leakage.
- Designed especially for use with ACCEL 170071 Pro Sleeve.

12 Ft. Roll for all Ignition Wire 170080

170080

PRO SLEEVE BOOT GUARD

Protect your spark plug boots with this double-layered fiberglass boot guard. It takes the heat and abrasion instead of the boot. An adjustable ring allows the boot guard to be rotated, which results in a longer lifespan. The material expands and stretches over irregular surfaces and is easy to install. Set of eight (8).

ACCEL Pro Sleeve Boot Guard. 170081

170079

PRO SLEEVE WIRE GUARD

new

Protect your spark plug wires against intense heat from exhaust manifolds and headers as well as abrasion. Helps prevent burning, cracking and hardening that could result in engine misfiring. Rated to 1200° F. Easy to install, you can insulate the entire length of the spark plug wire. Simply measure and cut sleeve to length as needed, remove the boot, slip on the sleeving and reinstall boot. Comes complete with heat shrink tubing to seal ends.

25 ft spool fits 7 - 8mm wire170079

170066

SHRINK SLEEVE WITH CYLINDER NUMBERS

- Heat shrinkable tubing provides extra spark plug and distributor boot sealing.
- Individually numbered for each cylinder 1 to 8 for easy wire replacement during spark plug changes or other engine work.
- Easy to apply using heat gun or hand-held hair dryer.

8 Numbered Pcs. — Fits all Ignition Wire* 170066

* Shrink Sleeve will not fit over ACCEL 8.8 Vari-Angle Spark Plug Boot.

UNIVERSAL COIL LEADS

Designed for use when mounting your coil in a non-stock or remote location. They feature a 42" premium 8.8mm lead with your choice of four core types: Graphite, Spiral, Stainless Steel or 300+ Race Wire. The 20 piece kit includes boots and terminals for conventional and HEI as well as male and female distributor and coil towers, terminal crimper/anvil tools, silicone lube and an instruction sheet.

Stainless Steel	170200
Graphite Suppression	170201
Spiral Suppression	170202
300+ Ferro Spiral™ Race Wire	170203

BOOT AND TERMINAL KITS

- For use with bulk ignition wire spools or for custom installations requiring various boot styles.
- Premium grade, 500 F peak rated silicone spark plug boots provide superior connection protection dielectric leakage, moisture, dirt and other chemical contaminants.
- High dielectric strength EPDM or premium grade silicone distributor/coil boots provide excellent resistance to flashover and crossfire and protect distributor cap and coil tower connection.
- Stainless steel spark plug terminals features positive locking snap clips to insure long life performance, excellent corrosion resistance and a positive connection.
- Spring loaded brass or stainless steel distributor terminals provide maximum electric conductivity and corrosion resistance.

TERMINAL CRIMPING JAWS

- Produce factory-quality terminators on any universal wire set with these inexpensive, re-usable steel tools.
- Ensure high pull strength and maximum conductivity.

For 7mm, 8mm Ignition wire 170042

For 8.8mm, 9mm Ignition wire..... 170043

300+ CRIMP™ PROFESSIONAL HEAVY DUTY TOOL

The best wire crimping tool available, an absolute must if you make a lot of custom wire sets or wiring. Constructed with a heavy duty hardened steel frame with molded non-slip hand grips. An adjustable ratchet mechanism produces consistent factory style high quality crimps. The 300+ Crimp™ Tool is supplied with three removable stripping / crimping die type jaws, one for 7-9mm spark plug wires and two styles for primary wire terminals.

ACCEL 300+ Crimp™ Tool 170036

SUPERSTOCK CRIMP™ TOOL

Constructed with a strong steel frame and features cushioned hand grips. Strips spark plug wires and crimps on 7-8mm terminals all in one tool. The SuperStock Crimp™ Tool produces a factory style crimp. Recommended strip length permanently marked on tool eliminating any guess work.

ACCEL SuperStock Crimp™ Tool 170037

8800 series wire sets are Spiral core, 8900 series wire sets are Graphite Suppression core. Part # suffix indicates wire set color; B-blue, K-black, R-red, Y-yellow.

CUSTOM FIT WIRE SETS

ENGINE SWAP CUSTOM-FIT APPLICATIONS

The following chart provides ACCEL Custom-Fit Wire Set applications by engine configuration. It is intended to help select Custom-Fit Wire Sets for cars and trucks that do not have the original engine. For custom routing of ignition wire, ACCEL recommends using Universal-Fit Wire Sets.

ENGINE APPLICATION	SUPER STOCK	SUPER STOCK SPIRAL	8.8 SPIRAL	300+ RACE WIRE	300plus EXTREME 9000	ARMOR SHIELD
AMC / JEEP ENGINES						
All 1974-70 304-401 CID engines	4043	5105K	8843	7043	•	8003B

1992-72	All 8 cyl. 318-360 eng. w/ elec. ignition	•	3010, B	•	4040, B, K, R	5040B, K, R, Y	8008B, Y
1989-80	All 4 cyl. except 1.7L/2.2L/2.5Lengs.	•	•	•	4015	•	8014Y

Part # suffix indicates wire set color; B-blue, K-black, R-red, Y-yellow.

Notes: Some 6 cyl. applications require and are shown covered by an 8 cyl. wire set. ACCEL does NOT recommend metallic core wire sets for application with electronic ignition systems because of their incompatibility with EMI / RFI (radio noise) emissions.

* Wire sets 8032 and 8033 feature ACCEL's Vari-Angle spark plug boot. Wire set 8037 features a short straight spark plug boot.

Part # suffix indicates wire set color; B-blue, K-black, R-red, Y-yellow.

Notes: Some 6 cyl. applications require and are shown covered by an 8 cyl. wire set. ACCEL does NOT recommend metallic core wire sets for application with electronic ignition systems because of their incompatibility with EMI / RFI (radio noise) emissions.

* Wire sets 8032 and 8033 feature ACCEL's Vari-Angle spark plug boot. Wire set 8037 features a short straight spark plug boot.

Part # suffix indicates wire set color: B-blue, K-black, R-red, Y-yellow.

Notes: Some 6 cyl. applications require and are shown covered by an 8 cyl. wire set. ACCEL does NOT recommend metallic core wire sets for application with electronic ignition systems because of their incompatibility with EMI / RFI (radio noise) emissions.

ACCEL BILLETPROOF™ ELECTRONIC BREAKERLESS DISTRIBUTORS

Introducing the ACCEL BilletProof™ 71000 Series distributors, an all new line of CNC billet, ready to run electronic breakerless distributors. The 71000 Series distributors are the perfect replacement for points style distributors or oversized OE style distributors. If you want a quicker starting, smoother running engine and plenty of high RPM power, along with great looks and a compact design that will fit in your engine compartment, then this is the distributor for you! Simply install the distributor, hook up connections to your 12 volt system and you're ready to run.

The ACCEL BilletProof™ 71000 Series distributors feature a CNC machined billet 6061-T6 aircraft grade aluminum housing. A precision machined centerless ground shaft with a 4 micron finish rides in extra long permanently oiled sintered bronze bushings for high speed stability and endurance. The BilletProof™ distributors are equipped with a self-contained high output, surface mount, electronic control module, a precision machined reluctor and a magnetic pickup for the most dependable magnetic breakerless performance distributor available. While a performance advance curve is dialed in and tested at the factory, the BilletProof™ distributors have an easy to adjust mechanical advance mechanism. The adjustable advance allows you to easily and accurately custom tailor an ignition curve to specifically match your engine's needs. The adjustment range is from 0-28 degrees crank, in 1 degree increments. All the BilletProof™ distributors feature an adjustable vacuum advance that allows you to tune your engine for optimal fuel economy. If you prefer running mechanical advance only, each distributor also comes with a vacuum advance lockout insert which allows you to remove the vacuum advance canister. All this is topped off with ACCEL's legendary tan Alkyd distributor cap and balanced rotor with brass inserts.

C.A.R.B. Approval Pending

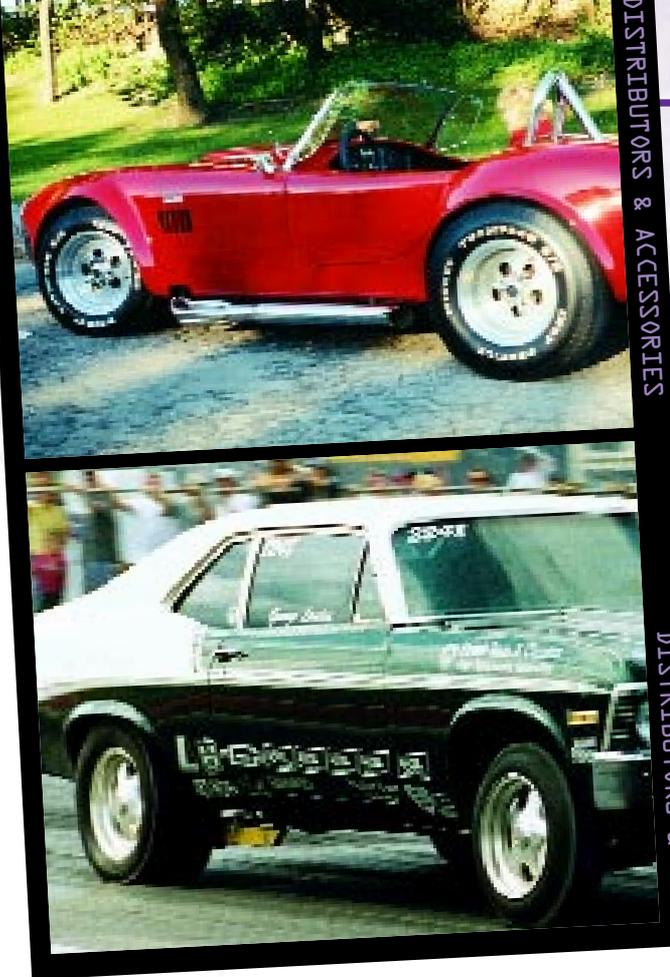

71100E

71200E

FOR MAXIMUM STREET PERFORMANCE, ECONOMY, RELIABILITY AND GREAT LOOKS, ACCEL'S BILLETPROOF™ 71000 SERIES DISTRIBUTORS ARE THE BEST CHOICE.

- Ready to Run, self contained electronic breakerless design.
- CNC machined billet 6061 T-6 aircraft grade aluminum housing.
- Precision centerless ground shaft with a 4 micron finish.
- Easily adjustable high performance mechanical advance mechanism. Factory dialed-in high performance ignition curve starting at 1,200 RPM with 24 degrees crank of advance at 3,000 RPM .
- Easily adjustable vacuum advance, factory dialed in for 10 degrees crank of advance at 10 inches of vacuum with lockout replacement insert for mechanical advance only.
- High Performance 60 kV tan Alkyd cap and balanced rotor with brass inserts.
- Iron or Steel alloy distributor gears compatible with flat tappet cams and hydraulic roller camshafts.
- Recommended ACCEL electronic breakerless coils p/n's; 8145, 8145C, 8140HV, 140001 or 140008
- Compatible with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharges ignition system.

- Rotor130402
- Cap120403
- Cap and Rotor kit:8342
- Module:35366
- Mechanical Avange Curve and Spring Kit29014

For a complete line of large diameter racing distributors, magnetos, crank triggers, and racing ignition systems, consult your Mallory catalog.

BILLETECH™

ACCEL BILLETECH™ DISTRIBUTORS

ACCEL BilleTech™ late model replacement distributors are the perfect replacement for the factory distributor in your late model Hot Rod. All BilleTech distributors feature:

- 6061 T6 Billet aluminum housing
- Hardened steel shaft
- 10,000 RPM caged needle roller bearing assembly
- ACCEL performance electronic pick up and module
- High dielectric strength cap, balanced rotor for trouble free performance
- Brass cap and rotor contacts
- Iron or Steel distributor gear compatible with flat tappet cams and OEM hydraulic roller camshafts.
- May be used with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system.

FORD BILLETECH DISTRIBUTORS

These are the billet distributors that Ford lovers have been waiting for. It's a high performance replacement for late-model Ford Mustangs with the 5.0L engine (and other similarly equipped 5.0L and 5.8L Ford vehicles with the Thick-Film ignition system). It features billet aluminum housing, steel shaft with 10,000-rpm bearings, and ACCEL performance cap and rotor. In addition, it comes complete with a high-performance ACCEL thick-film style module! Installation is easy. Out with the old distributor, in with the BilleTech and plug in the factory style connectors. No cutting, wiring or soldering. Just set the timing. Now with steel alloy gear.

GM HEI REMOTE MOUNT COIL BILLETECH DISTRIBUTOR

This special BilleTech design was built as a performance replacement for late model computer controlled Camaros and Firebirds (F-Body cars) and similarly equipped vehicles. The housing is our precision-machined billet design, featuring steel shaft and twin roller bearings for reliable 10,000-rpm performance. The distributor is topped with our famous ACCEL performance cap and rotor. The GM HEI remote mount coil BilleTech also includes the same famous ACCEL's high output electronic trigger mechanism found in the Race Billetech. A powerful ACCEL ignition module, and an ACCEL performance cap and rotor. The GM HEI remote mount coil BilleTech design was engineered for simple, no-hassle installation. It comes complete with original, factory-style connectors. Just bolt it on and plug it in and you're ready for serious ACCEL performance!

* Requires using spark plug wire set with male tower distributor terminals, such as same engine application for 1977 and newer. See the ACCEL spark plug wire application guide for exact part #'s.

##Includes the proper distributor drive gear for flat tappet and hydraulic roller camshafts

AMC/Ford Distributors use P/N 130504 cap adapter and P/N 130604 wire retainer.

For a complete line of large diameter racing distributors, magnetos, crank triggers, and racing ignition systems, consult your Mallory catalog.

201E

ACCEL BLUEPRINT™ DISTRIBUTORS

ACCEL BluePrint distributors are the perfect choice for replacing the worn factory distributor in your daily driver, RV, Tow Vehicle or street machine to renew performance and increase fuel economy. All ACCEL BluePrint distributors feature premium hand sorted cores which are thoroughly inspected, gauged, disassembled and blueprinted for optimum performance. All units are manufactured to ACCEL's high quality control standards. The ACCEL BluePrint distributors feature:

- High Performance ACCEL Electronics
- 32 ounce performance points and condenser on points triggered models
- Hand Sorted Cores
- High dielectric strength cap and rotor with brass cap and rotor contacts
- Iron or Steel distributor gear
- Direct plug in replacement with factory type connectors for plug and play easy installation

RESTRICTED CLASS RACING HEI

ACCEL also offers two additional HEI distributors for Stock or restricted classes which require using a stock type HEI distributor. Both units are ready to run, complete with ACCEL Brute Thunder coil and ACCEL high performance module part #35367.

SPARK PLUGS

ACCEL U-GROOVE SPARK PLUG

CONVENTIONAL SPARK PLUG

ACCEL'S U-GROOVE DESIGN PUTS MORE FIRE IN THE HOLE, SO YOU GET MORE POWER TO THE WHEELS

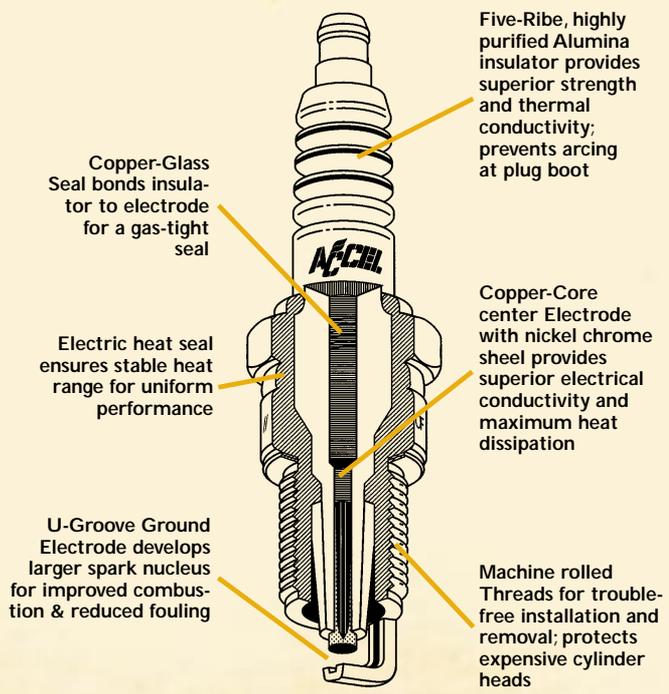

One of the hottest features of ACCEL Spark Plugs is the unique U-groove ground electrode. This specially designed electrode was developed to meet the demand for improved ignitability and increased fuel combustion. Simply stated ... Higher Performance.

IMPROVED IGNITABILITY

As illustrated below, the U-groove of the ground electrode results in less flame dissipation. It gives the flame a groove to grow in, creating a larger flame front for a more complete combustion even in the case of lean air-fuel mixture. Effectively, it produces greater firing energy. On the other hand, conventional plugs squash the flame. This is called "quenched effect" and leads to spark plug misfire and rough idle. This has a negative effect on the spark. With the U-groove ground electrode firing can be greatly improved without increasing the spark gap.

IMPROVED THROTTLE RESPONSE & BETTER FUEL EFFICIENCY

ACCEL's U-groove ground electrode produces a larger spark nucleus which stimulates faster combustion, producing more power for higher RPM's of longer duration. The end result is an increase in performance with improved throttle response and due to a more complete burn, greater fuel efficiency and reduced emissions.

SPARK PLUG HOLDER

This convenient spark plug holder holds up to eight spark plugs up-side down allowing you to read your plugs easily and quickly.

Spark Plug Holder 1010

SPARK PLUG INDEXER

Designed for both flat and taper seat 14mm spark plugs, this indexer is made from billet aluminum with a gold anodized finish for marking the position of the ground electrode. The indexer is knurled for hand held use or can be secured in a vise on the machined flats.

Spark Plug Indexer 1005

INDEX WASHER KITS

Soft copper ACCEL spark plug washers allow racers to "index" or adjust spark plug ground electrode position for optimum flame front generation or maximum plug-to-piston clearance.

30 Assorted Washers -14mm tapered seat with 5/8" Hex 1001

30 Assorted Washers -14mm flat seat. 1002

FORD HALF-THREAD/ FULL-THREAD EXPLANATION

There are certain Ford vehicles where the original equipment spark plugs have what is known as a HALF-THREAD shell design. These plugs are 3/4" in body reach but are only threaded half way (see Fig. A). The purpose of this design is to allow the spark plugs to be automatically installed at the time of engine assembly at the factory. These half-threaded spark plugs are duplicates of Full-Thread designed spark plugs. They are identical in every other respect from: heat range, reach, hex size and insulator nose designs (see Fig. B). If you compare Figures A & B, you can see that both spark plug designs protrude the same distance into the combustion chamber. Therefore in applications that call for an ACCEL U-Groove 0504 plug, you may use an ACCEL U-Groove 0514. The same hold true if applications call for a ACCEL U-Groove 0506, you may use an ACCEL U-Groove 0516.

1. This application listing is to be used as a guide only. Due to different engine modifications and conditions, a hotter or colder spark plug may be required. To ensure correct spark plug application verify V.I.N. code on vehicle. 2. Prefix ^ sign denotes new part numbers available 11/96. 3. Part number 276S may be used for Header applications in place of P/N 276. 4. Part number 576S may be used for Header applications in place of P/N 576. 5. Part number 574S may be used for Header applications in place of P/N 574 or 274. 6. Part number 437S may be used for Header applications in place of P/N 137, 437. 7. May require additional Packs.

FORD HALF-THREAD/ FULL-THREAD EXPLANATION

There are certain Ford vehicles where the original equipment spark plugs have what is known as a HALF-THREAD shell design. These plugs are 3/4" in body reach but are only threaded half way (see Fig. A). The purpose of this design is to allow the spark plugs to be automatically installed at the time of engine assembly at the factory. These half-thread spark plugs are duplicates of Full-Thread designed spark plugs. They are identical in every other respect from heat range, reach, hex size, and insulator nose designs (see Fig.B). If you compare Figures A & B, you can see that both spark plug designs protrude the same distance into the combustion chamber. Therefore in applications that call for an Accel U-Groove 0504 plug, you may also use an Accel U-Groove 0514. The same hold true if applications call for a Accel U-Groove 0506, you may also use an Accel U-Groove 516.

VEHICLE IDENTIFICATION CODES (V.I.N. NUMBERS)

Some vehicles have more than one engine option available from the manufacturer. In some cases, this means that a spark plug may only fit one specific engine, and may not be used for another version of the same engine. Most V.I.N. numbers for late model cars and light trucks of Domestic manufacturing will be located on the drivers side dashboard, where the windshield meets the glass. Earlier domestic cars and light trucks will be located on the drivers side door pillar, or inside the engine compartment. If you cannot locate the V.I.N. plate on your vehicle, read if from your registration card issued to you from your state department of motor vehicles.

CAPS, ROTORS, POINTS & CONDENSERS FOR RACING DISTRIBUTORS

High output racing ignition systems place severe demands on distributor caps and rotors. The extremely high voltage tries to pierce distributor cap and rotor material. Repeated surges of spark current do their best to deposit "tracks" of carbon on the material's surface. At high RPM, centrifugal force pulls at rotor springs and inserts. High underhood temperatures try to turn molded parts into liquid.

At racing engine speeds, points and condensers also want to self-destruct. The heavy spring tension required to prevent "points-float" tries to wear away the points' rubbing block and deform its arms and brackets. The high current generated by racing coils wants to arc across the contacts as they open. Condensers, in an effort to buffer the rapidly switching current, heat up in the process. It's an extremely demanding environment.

ACCEL knows how to deal with these conditions. For nearly 30 years, ACCEL has been manufacturing distributor caps, rotors, points, and condensers for racing applications world-wide. As a direct result of racing involvement, ACCEL engineers have continuously developed improvements in materials and production techniques which have kept ACCEL ahead of the competition. Consequently, ACCEL Tune-Up Parts for Racing Distributors are unequalled in precision, quality, consistency, and reliability.

POINTS & CONDENSERS

POINTS & CONDENSERS

(SEE APPLICATION CHART PAGES 185-193)

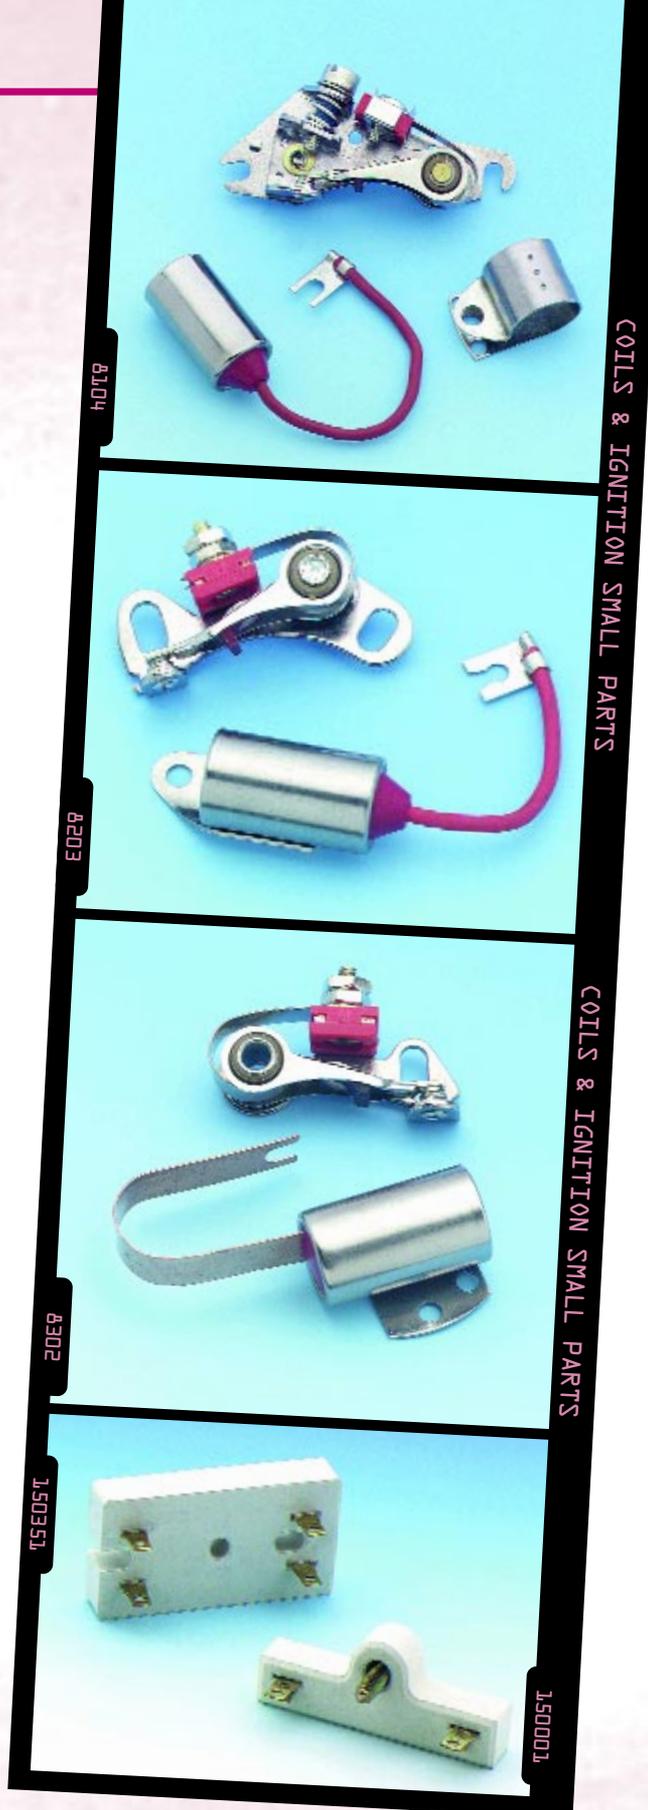

- ACCEL Points Sets are equipped with extra-thick contact arms to prevent flexing at high RPM.
- Large, radiused tungsten contacts provide crisp circuit-breaking for peak coil output.
- High strength phenolic rubbing blocks provide superior durability when used with heavy spring tension.
- Racing points sets are equipped with severe duty 48 oz. spring tension to prevent "points float" at engine speeds to 9,000 RPM. Racing points sets are not recommended for daily drivers or street vehicles.
- "High Performance" Points Sets are equipped with heavy 32 oz. spring tension to prevent "points float" at engine speeds to 6,500 RPM.
- "Heavy Duty" Points Sets use 23 oz. springs for engine speeds to 5,000 RPM.
- ACCEL Performance Condensers contain special mylar/foil windings to protect against points pitting.
- Moisture-proof Buna-N condenser seals maximize ignition reliability.

BALLAST RESISTORS

- Precision wound by computer to ensure accurate resistance value.
- Premium quality ceramic resistor bodies provide maximum durability and superior heat transfer.
- Special resistance wire maintains stable coil current to prevent overheating and to promote long points life.
- Recommended whenever a new coil is installed.

Resistance Value	Application	Part No.
0.85 Ohm	140001 Super Coil	150001
1.35 Ohm	140205 Racing Coil.	150250
1.82 Ohm	140108 Racing Coil	150150
0.56/5.00 Ohm	Dual Element Resistor for 140305 Racing Coil . . .	150351

NOTE: No ballast resistor is required when using ACCEL 41000, 51000, 61000, 71000 Series Electronic Breakerless Distributors or when using ACCEL 300+ Ignition Control Modules — no matter which coil is used.

DISTRIBUTOR CAPS & ROTORS

(SEE APPLICATION CHART PAGES 142-184)

- ACCEL's precision-ground, highly polished compression and injection molding manufactures the finest Distributor Caps and Rotors available.
- High performance 60kV-rated tan alkyd molding compound (mineral filled polyester for late model Ford & GM parts) is used for superior protection from "arc-thru" and crossfire.
- Compression molded caps are stress-relieved immediately after molding in special fixtures to ensure dimensional stability.
- High conductivity, corrosion resistant brass inserts and stainless steel rotor springs provide unrestricted spark energy flow.
- "Heavy-Duty" Black Alkyd Caps and Rotors are also offered as a lower cost alternative.

CONTROL MODULES

FORD THICK FILM MODULATORS & GM HEI CONTROL MODULES NOW LEGAL IN 50 STATES!

(SEE APPLICATION CHART PAGES 142-184)

- Fits most stock and modified Distributors.
- Solid state electronics provide high coil output and superior reliability.
- Dwell Control circuit ensures long, consistent coil charging.
- Current Control circuit protects against coil over heating.
- Resists false triggering from RFI of high output coils.
- Ford Thick Film Ignition (TFI) coverage includes both modulators mounted on the distributor and remote mount applications.
- GM coverage includes HEI 4-pin, computer controlled 7-pin and remote coil mount 8-pin applications.

ULTRA HIGH PERFORMANCE IGNITION MODULE FOR THE GM 4-PIN HEI DISTRIBUTOR

ACCEL's engineers have designed a new ultra high performance ignition module to overcome the problems and shortcomings of most OEM and aftermarket GM HEI 4-pin modules. Modified dwell circuitry draws sufficient amperage to insure full coil saturation up to 9000 RPM. This eliminates the high RPM miss due to lack of sufficient spark energy output. While other designs have used hand-placed and soldered components, this completely new design utilizes the latest surface mount electronic technology to maximize efficiency, output and reliability while minimizing size and problems with vibration and heat buildup. Requires no wiring harness or distributor modifications and is a direct plug-in replacement for all GM and aftermarket 4-pin HEI modules.

Ultra Performance GM HEI 4-pin Module . . .35367

ULTRA HIGH PERFORMANCE MODULE FOR ACCEL ELECTRONIC BREAKERLESS DISTRIBUTORS

The advanced engineering for the HEI ultra performance module p/n 35367 has been repackaged into a smaller size to fit inside the bowl of the ACCEL electronic breakerless distributors. The high amperage dwell circuit ensures full coil saturation for high RPM performance. Surface mount electronic technology maximizes efficiency, output and reliability. ACCEL 51000, 61000 and 71000 Series Electronic Breakerless Distributors are equipped with the 35366 module which operates on 12 volts, so there is no need to run a ballast resistor. ACCEL coils to use with the 35366 module include p/n's: 8145, 8145C, 140001, 140008 and 8140HV.

SUPER COIL

Engineered for faster rise time, longer spark duration and increased performance. Unique design with premium grade wire, special low resistance, high turns ratio windings. Produce higher spark energy with breakerless electronic ignition systems. For points applications the supplied 0.85 Ohms ballast resistor must be used in conjunction with the vehicles original ballast resistor, if so equipped. Oversized molded case with integral cooling fins and high capacity oil filled construction provides high thermal conductivity ensuring cool operation and long life. Extra tall tan Alkyd tower and integral voltage dam eliminates "flashover" to primary terminals. Comes complete with mounting hardware and 0.85 Ohms ballast resistor. Effective to 6,500 RPM.

SPECIFICATIONS

Primary Resistance	0.7 Ohms
Secondary Resistance	11.8 k Ohms
Turns Ratio	70 : 1
Maximum Voltage	45,000 volts

Super Coil.....14001

SUPERSTOCK COIL HIGHER ENERGY

improved

Excellent high performance replacement for import and domestic vehicles with a canister type oil filled can coil. Re-engineered windings for even higher energy output resulting in quicker starting, improved throttle response and more high RPM power. Designed to work with both points style and breakerless electronic ignition systems. Special crimped and soldered internal connections ensure positive contacts. Heavy duty black Alkyd tower provides "flashover" protection to primary terminals. Available in "ACCEL Yellow" or Chrome Plated can. Effective to 6,500 RPM.

SPECIFICATIONS

Primary Resistance	1.2 Ohms
Secondary Resistance	8.9 k Ohms
Turns Ratio	100 : 1
Maximum Voltage	42,000 volts

SuperStock coil.....8140 / 8140C

SUPERSTOCK HIGH VIBRATION COIL

new

Excellent choice for high performance, heavy duty and off-road use. Canister style can coil is completely encapsulated in high temperature epoxy to protect the windings and internal connections from the harsh vibration and impacts that could destroy a typical oil filled canister style can coil. Engineered with special low resistance, high turns ratio windings to produce higher energy output with breakerless electronic ignition systems and replacement distributors. For points applications a 0.85 Ohms ballast resistor (not included) must be used in conjunction with the vehicles original ballast resistor, if so equipped. Heavy Duty black Alkyd over-molded tower provides "flashover" protection to primary terminals. Can be mounted in any orientation.

SPECIFICATIONS

Primary Resistance	0.6 Ohms
Secondary Resistance	9.5 k Ohms
Turns Ratio	123 : 1
Maximum Voltage	45,000 volts

SuperStock High Vibration coil8140HV

UNIVERSAL COILS

SUPERSTOCK BREAKERLESS ELECTRONIC COIL

Excellent high performance coil for vehicles that have been converted from points to a breakerless electronic distributor or electronic ignition system, where a canister type oil filled can coil is preferred. Designed with optimized low resistance, high turns ratio windings to work specifically with ACCEL 41, 51, 61 & 71000 Series breakerless electronic replacement distributors. Engineered for higher energy output resulting in quicker starting, improved throttle response and more high RPM power. Special crimped and soldered internal connections ensure positive contacts. High performance tan Alkyd tower provides "flashover" protection to primary terminals. Available in "ACCEL Yellow" or Chrome Plated can.

SPECIFICATIONS

Primary Resistance	0.7 Ohms
Secondary Resistance	10.8 k Ohms
Turns Ratio	113 : 1
Maximum Voltage	45,000 volts

SuperStock Breakerless Electronic coil8145 / 8145C

ELECTRONIC SUPER COIL

High energy windings optimized for high performance. Designed to work with both breakerless electronic ignition systems and late model computer controlled ignition systems. E-core design minimizes inductance losses and maximizes energy output. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. The finned injection molded housing provides efficient cooling ensuring long life and great looks. SAE male tower offers greater coil wire retention and protection from arcing. Come complete with adapter harness for late model GM and Ford vehicles, a universal ACCEL 8.8mm coil lead, and mounting hardware kit.

SPECIFICATIONS

Primary Resistance	0.5 Ohms
Secondary Resistance	9.6 k Ohms
Turns Ratio	75 : 1
Maximum Voltage	42,000 volts

CD ONLY CANISTER STYLE SUPER COIL

Specifically design to work with CD ignition systems only. For vehicles where a traditional canister type oil filled can coil is preferred or required. Engineered for extended use such as road and oval track racing, high RPM street engines as well as drag racing. High energy windings designed especially for optimum performance with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. This coil is best for engines that operate above 3,000 RPM and is effective to 10,000 RPM.

SPECIFICATIONS	Tested with ACCEL 300+ Ignition
Primary Resistance	0.9 Ohms
Secondary Resistance	7.3 k Ohms
Turns Ratio	100 : 1
Maximum Voltage	45,000 volts
Peak Current	160 mA
Spark Duration	420 μS

CD only canister style Super Coil140002

HEAVY DUTY ELECTRONIC / CD TYPE E-CORE SUPER COIL

High energy heavy gauge windings deliver unmatched performance. Designed to work with both breakerless electronic ignition systems or ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition systems. E-core design minimizes inductance losses and maximizes energy output. Special high temperature epoxy resists shock and vibration and provides excellent thermal conductivity. The extruded aluminum heat sink provides maximum cooling to ensure long life. SAE male tower offers greater coil wire retention and protection from arcing. Comes complete with insulated primary wire connector and universal ACCEL 8.8mm Spiral coil lead and mounting hardware kit.

SPECIFICATIONS	Tested with ACCEL 300+ Ignition
Primary Resistance	1.3 Ohms
Secondary Resistance	7.3 k Ohms
Turns Ratio	100 : 1
Maximum Voltage	48,000 volts
Peak Current	220 mA
Spark Duration	300 μS

Heavy Duty Electronic / CD type E-core Super Coil140009

Coil resistance specification shown are nominal +/- 10%

RACING COILS

new

HEAVY DUTY CD ONLY E-CORE SUPER COIL

Professional continuous use racing coil specifically design to work with CD ignition systems only. High energy, heavy gauge windings designed especially for optimum performance with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. E-core design minimizes inductance losses and maximizes energy output. Special high temperature epoxy resists shock and vibration and provides excellent thermal conductivity. The extruded aluminum heat sink provides maximum cooling to ensure long life. SAE male tower offers greater coil wire retention and protection from arcing. Comes complete with insulated primary wire connector and universal ACCEL 8.8mm 300+ Race Wire coil lead and mounting hardware kit. This coil is effective to over 10,000 RPM.

SPECIFICATIONS	Tested with ACCEL 300+ Ignition
Primary Resistance	0.2 Ohms
Secondary Resistance	3.6 k Ohms
Turns Ratio	95 : 1
Maximum Voltage	48,000 volts
Peak Current	300 mA
Spark Duration	360 µS

Heavy Duty CD only E-core Super Coil. 140019

PROFESSIONAL DRAG RACE II CD COIL IMPROVED - HIGHER ENERGY, LONGER ENDURANCE

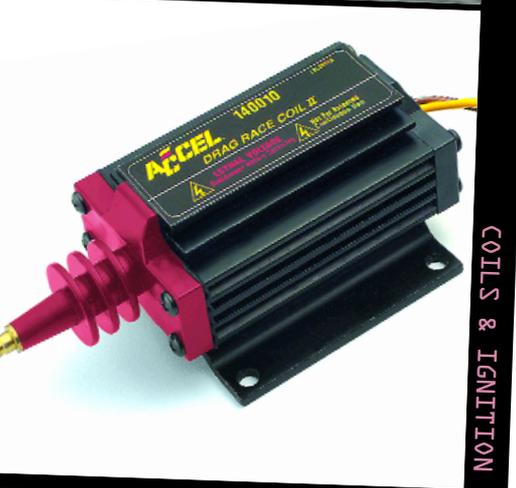

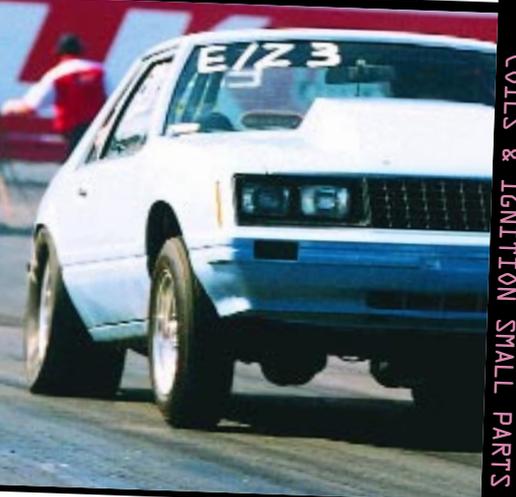

IMPROVED

Re-engineered for extended use and ultra high output. This coil is capable of delivering over 1 full amp to the spark plugs. Design to work with CD racing ignition systems only. The unique patent pending core design and ultra low resistance heavy gauge windings have been designed for optimal performance with a Mallory, Crane, Holley or MSD capacitive discharge racing ignition system. Special high temperature, high density epoxy encapsulation resists severe shock and harsh vibration while providing maximum thermal conductivity. The light weight anodized extruded aluminum housing provides maximum cooling. SAE male tower with three high voltage dams provides extended protection from arcing. Can be mounted in any orientation and comes complete with a sealed weatherproof primary leads and connector. This coil is effective to over 12,000 RPM.

SPECIFICATIONS	Tested with Mallory HyFire VII ignition
Primary Resistance	0.09 Ohms
Secondary Resistance	0.48 Ohms
Turns Ratio	170 : 1
Maximum Voltage	50,000 volts
Peak Current	1,200 mA
Spark Duration	170 µS

GM STREET / STRIP 1977-55 CANISTER STYLE RACING COIL

Excellent high performance replacement for GM vehicles equipped or retro-fitted with AC/Delco style canister type oil filled can coil. Special windings engineered for maximum energy output resulting in greatly increased high RPM power, quicker starting and improved throttle response. Designed to work with both GM transistorized and points style ignition systems. Points applications require a 1.82 Ohms ballast resistor (p/n 150150, not included) to be used in place of the original ballast resistor. Special crimped and soldered internal contacts, special spring load windings and silica steel core eliminate vibration-induced failures. High performance tan Alkyd tower provides "flashover" protection to primary terminals. Gloss black can finish. This coil is effective to 8,500 RPM.

HEI IN-CAP 1991-73 SUPER COILS

Engineered for higher energy output resulting in quicker starting, improved idle quality, crisper throttle response and more high RPM power. Compatible with both original HEI ignition systems and later model computer controlled HEI systems. No need to remove or re-time distributor. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. The finned injection molded coil cover with integral wire hold down ring, provides efficient cooling ensuring long life and great looks. Comes complete with simplified ground strap, mounting screws, silicone coil gasket and carbon contact brush / spring.

*P/N 140003 has red and yellow primary wire.
Typical HEI applications include; Chevrolet 90 degree V6
& most V8 and Cadillac V8*

*P/N 140005 has red and white primary wire.
Typical HEI applications include; Buick V6 and V8,
Oldsmobile V8, Pontiac V8 and 1981-91 Corvette*

GMTPI COIL COVER FOR 140003 /140005 HEI IN-CAP SUPER COILS

Replaces stock TPI coil cover plate to provide clearance for Accel HEI in-cap Super Coil P/N's 140003 & 140005. Finned aluminum casting design integrates perfectly with TPI intake manifold. Attaches with OE bolts. Fits 1991-85 GM 5.0L/5.7L TPI engines.

GM TPI Coil Cover140006

GM HEI REMOTE MOUNT 1995-84 SUPER COIL

Engineered with optimized low resistance, high turns ratio windings around an M36 high silicone magnetic steel E-core for higher energy and voltage outputs. Results in quicker starts, improved idle quality, crisper throttle response and more high RPM power. Compatible with late model GM computer controlled remote mount HEI systems. Direct bolt-in, plug-in replacement. Can also work with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. Brass coil wire contact increases energy transfer and resists corrosion better than aluminum. Comes complete with new mounting hardware. High dielectric strength "ACCEL Yellow" over molded housing.

SPECIFICATIONS	
Primary Resistance	0.3 Ohms
Secondary Resistance	8.8 k Ohms
Turns Ratio	134 : 1
Maximum Voltage	48,000 volts
Peak Increase in Energy vs. OE	36%
Peak Increase in Voltage vs. OE	27%

GM HEI Remote Mount 1995-84 Super Coil . . .140011

GM HEI INTENSIFIER KIT

Allows the conversion of a GM HEI in-cap coil distributor to use the ACCEL 140001 Super Coil. Comes complete with the 140001 Super Coil, special distributor cap and modified coil cavity cover, an ACCEL 8.8mm suppression coil lead and a OE style plug-in harness.

GM HEI Intensifier Kit12100E

GM HEI IN-CAP COIL LOW OHMS CONTACT BRUSH

The standard OE carbon brush in GM's HEI in-cap coil distributor has a very high (10 k Ohms) resistance. When an aftermarket capacitive discharge ignition system, such as an ACCEL, Mallory, Crane, Holley or MSD unit is installed, this high resistance can create enough heat to melt the distributor cap. ACCEL's low Ohm contact brush solves this problem because it passes virtually all the energy to the rotor without causing excessive heat build up.

GM COILS

BRUTE THUNDER HEI IN-CAP SUPER COIL

Designed to be the highest output GM style HEI in-cap coil, Period! Engineered with enhanced, low resistance, low inductance, high-turns ratio windings around an M36 high silicone magnetic steel core which allows the coil to be charged faster for more energy at high RPMs, and no loss of energy at idle. Compatible with both original HEI ignition systems and later model computer controlled HEI systems. Can also work with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. No need to remove or re-time distributor. Special high temperature, high density epoxy resists even the unforgiving shock, vibration and high temperatures of street/strip, race and off-road use. Comes complete with simplified ground strap, mounting screws, silicone coil gasket, low Ohm contact brush / spring and an ACCEL tan coil cover. Effective to over 9,000 RPMs. For the ultimate in HEI in-cap performance, use ACCEL's ultra high performance HEI 4-pin module p/n 35367.

P/N 140013 has red and yellow primary wire.
 Typical HEI applications include; Chevrolet 90 degree V6 & most V8 and Cadillac V8

P/N 140055 has red and white primary wire.
 Typical HEI applications include; Buick V6 and V8, Oldsmobile V8, Pontiac V8 and 1991-81 Corvette

Note: 1984-91 Corvettes with digital tachometers may require the use of the standard OE high resistance carbon contact brush.

GM COILS

GM MAGNAVOX DIS SUPER COIL **new** PACK FOR 1992-84 BUICK V6

Re-engineered to be the only true high performance Magnavox style DIS coil pack for Buick V6 engines. An absolute must for Street/Strip use in Turbo Regals, Grand Nationals, GNX's and the '89 Turbo Trans Am. Constructed with new section bobbin technology, specialized silicone magnetic steel core, along with optimized low resistance windings and high turns ratio results in higher energy and voltage output and longer arc duration. This is critical in highly pressurized turbo charged engines. Compatible with OE computer controlled ignition system as well as a Crane or MSD capacitive discharge DIS ignition systems. Special high temperature encapsulation resists shock and vibration, while increasing thermal conductivity. Brass contacts increases energy transfer and resists corrosion better than aluminum. High dielectric strength black over molded housing. Comes complete with mounting hardware and gaskets.

SPECIFICATIONS	Tested with OE Buick coil driver
Primary Resistance	0.7 Ohms
Secondary Resistance	12.3 k Ohms
Turns Ratio	86 : 1
Maximum Voltage	42,000 volts
Peak Increase in Energy vs. OE	10%
Peak Increase in Voltage vs. OE	9%
Peak Increase in Arc Duration vs. OE	6%
Peak Increase in Current vs. OE	8%

GM Magnavox DIS Super Coil
Pack for 1992-84 Buick V6140016

GM AC/DELCO STYLE **new** SUPER DIS COIL FOR 1998-86

Re-engineered to be the only true performance AC/Delco style DIS coil. "Raised Dome" construction, section bobbin technology, highly specialized silicone magnetic steel core along with optimized windings, resistance, and turns ratio results in higher energy and voltage outputs and longer dwell. Compatible with OE computer controlled ignition system as well as a Crane or MSD capacitive discharge DIS ignition systems. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. Brass contact increases energy transfer and resists corrosion better than aluminum. High dielectric strength "ACCEL Yellow" over molded housing. Packaged as single unit: 4 cyls require 2 coils, 6 cyls require 3 coils and 8 cyls require 4 coils.

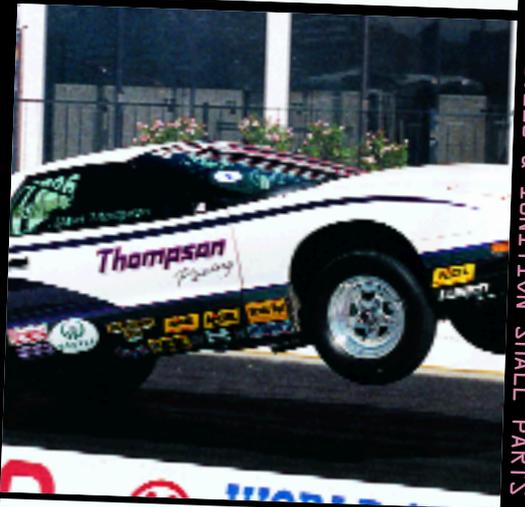

SPECIFICATIONS	Tested with GM coil driver
Primary Resistance	0.5 Ohms
Secondary Resistance	8.0 k Ohms
Turns Ratio	75 : 1
Maximum Voltage	45,000 volts
Peak Increase in Energy vs. OE	11%
Peak Increase in Voltage vs. OE	10%
Peak Increase in Dwell vs. OE	21%
Peak Increase in Current vs. OE	12%

FORD STREET / STRIP 1974-57 CANISTER STYLE POINTS RACING COIL

Excellent high performance replacement for Ford vehicles equipped with points distributors. Special windings engineered for maximum energy output resulting in greatly increased high RPM power, quicker starting and improved throttle response. Requires a 1.35 Ohms ballast resistor (p/n 150250, not included) to be used in place of the original ballast resistor. Special crimped and soldered internal contacts, special spring load windings and silica steel core eliminate vibration-induced failures. High performance tan Alkyd tower provides "flashover" protection to primary terminals. Gloss black can finish. This coil is effective to 8,500 RPM.

SPECIFICATIONS

Primary Resistance	1.3 Ohms
Secondary Resistance	7.3 k Ohms
Turns Ratio	60 : 1
Maximum Voltage	38,000 volts

Ford Street / Strip 1974-57
canister style points Racing coil 140205

FORD STREET / STRIP 1985-73 CANISTER DURA-SPARK STYLE RACING COIL

Excellent high performance replacement for Ford vehicles equipped or retro- fitted with Dura-Spark ignition systems and canister type oil filled can coil. The primary terminals are exactly match to the OE Ford Dura-Spark coil so the "horseshoe" style connector fits perfectly, with no need to cut or splice your vehicles wiring. Can also work with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. Special windings engineered for maximum energy output resulting in greatly increased high RPM power, quicker starting and improved throttle response. Special crimped and soldered internal contacts, special spring load windings and silica steel core eliminate vibration-induced failures. High performance tan Alkyd tower provides "flashover" protection to primary terminals. Gloss black can finish. This coil is effective to 8,500 RPM.

SPECIFICATIONS

Primary Resistance	1.4 Ohms
Secondary Resistance	7.3 k Ohms
Turns Ratio	65 : 1
Maximum Voltage	45,000 volts

Ford Street / Strip 1985-73
canister Dura-Spark style Racing coil 140207

FORD EEC-IV 1998-84 SUPER COIL

Engineered with optimized low resistance, high turns ratio windings around an M36 high silicone magnetic steel E-core for higher energy and voltage outputs. Results in quicker starts, improved idle quality, crisper throttle response and more high RPM power. Compatible with late model Ford EEC-IV computer controlled ignition system equipped with a TFI distributor. Direct bolt-in, plug-in replacement. Can also work with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition system. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. Brass coil wire contact increases energy efficiency and resists corrosion better than aluminum. High dielectric strength "ACCEL Yellow" over-molded housing.

SPECIFICATIONS	
Primary Resistance	0.2 Ohms
Secondary Resistance	8.8 k Ohms
Turns Ratio	132 : 1
Maximum Voltage	48,000 volts
Peak Increase in Energy vs. OE	37%
Peak Increase in Voltage vs. OE	23%

Ford EEC-IV 1998-84 Super Coil 140012

FORD SUPER EDIS COIL PACK FOR 1998-89

Re-engineered to be the only true performance Ford 4-tower style EDIS coil. Advanced section bobbin technology, highly specialized silicone magnetic steel core along with optimized winding, resistance, and turns ratio results in higher energy and voltage outputs and longer arc duration. Direct bolt-in, plug-in replacement. Compatible with Ford EDIS computer controlled ignition system as well as a Crane or MSD capacitive discharged DIS ignition systems. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. Secondary towers molded in high dielectric strength "ACCEL Yellow". Packaged as single unit; 4 cyls require 1 coil pack, "twin plug" 4 cyls require 2 coil packs and 8 cyls require 2 coil packs.

SPECIFICATIONS		Tested with Ford EDIS system
Primary Resistance	0.5 Ohms	
Secondary Resistance	11.6 k Ohms	
Turns Ratio	85 : 1	
Maximum Voltage	42,000 volts	
Peak Increase in Energy vs. OE	11%	
Peak Increase in Voltage vs. OE	8%

SUPERSTOCK FOR 1992-79 MOPAR APPLICATIONS WITH CANISTER STYLE COIL

Excellent high performance replacement for 1979 and later vehicles with a canister type oil filled can coil. Exact duplicate of OE spark plug style secondary contact inside tower. No need to replace or custom make coil wire leads. Re-engineered windings for even higher energy output resulting in quicker starting, improved throttle response and more high RPM power. Designed to work with OE ignition systems and MOPAR high performance ignition computers. Special crimped and soldered internal connections ensure positive contacts. Heavy duty tan Alkyd tower provides "flashover" protection to primary terminals. Can finished in "ACCEL Yellow".

SPECIFICATIONS	
Primary Resistance	1.8 Ohms
Secondary Resistance	7.2 k Ohms
Turns Ratio	80 : 1
Maximum Voltage	38,000 volts

SuperStock for 1992-79 MOPAR applications with canister style coil 8140M

DODGE "MAGNUM" TRUCK / JEEP 1997-90 SUPER COIL

Engineered with optimized low resistance, high turns ratio windings around an M36 high silicone magnetic steel C-core for higher energy and voltage outputs. Results in quicker starts, improved idle quality, crisper throttle response and more high RPM power. Compatible with late model MOPAR J-TEC computer controlled ignition system and MOPAR high performance ignition computers. Direct bolt-in, plug-in replacement. Can also work with an ACCEL, Mallory, Crane, Holley or MSD capacitive discharge ignition systems. Special high temperature epoxy resists shock and vibration, while increasing thermal conductivity. Brass coil wire contact increases energy transfer efficiency and resists corrosion better than aluminum. High dielectric strength "ACCEL Yellow" over molded housing.

SPECIFICATIONS	
Primary Resistance	1.0 Ohms
Secondary Resistance	12.7 k Ohms
Turns Ratio	76 : 1
Maximum Voltage	42,000 volts
Peak Increase in Energy vs. OE	34%
Peak Increase in Current vs. OE	17%
Peak Increase in Arc Duration vs. OE	23%
Peak Increase in Dwell vs. OE	36%

ELIMINATE YOUR STARTING PROBLEMS WITH ACCEL'S ULTRA-LITE STARTERS!

When you need the ultimate in dependability, reliability and performance, ACCEL's Ultra-Lite Starter is your only choice. Even in the hottest conditions, on or off the track, you get guaranteed starts. Our Ultra-Lite Starter draws less current, produces higher torque, and increases available amps to your ignition system. Along with a compact design which provides increased clearance for oil pan and headers and easier installation, you'll be eliminating your starting problems forever!

ACCEL'S ULTRA-LITE STARTER BENEFITS:

- Race-proven: NHRA, IHRA, and NASCAR approved
- Aviation lubricants used to prevent hot start failures in racing situations
- Dyno-tested under starting load for ensured dependability and reliability
- 33% smaller than most original equipment starters for increased oil pan, headers and ground clearance
- 3.75:1 gear reduction means 40% to 50% more starting torque than OE starters
- Low amperage (current) draw of 210-250 amps at full starting load, increased spark (amperage) for the rest of the ignition system – a must with high compression engines
- Full ball-bearing construction means less internal friction and more torque transferred to the engine
- Light-weight starter: 1.4 kw - 10.6 lbs. (approx.)
- High-temperature epoxy-encapsulated armature resists heat and vibration for high-performance applications
- Heavy-duty solenoid utilizes a contact disc instead of a "bar-type" contact and provides maximum reliability and long life
- "Bolt-on-replacement" makes installation quick & easy
- Replacement parts and rebuilding services available
- Wide variety of applications including drag racing, road racing, circle track, tractor pulling, street rods, recreational vehicles, mud boggers, work vehicles, off-shore racing and street machines.

ULTRA-LITE STARTERS

ULTRA-LITE STARTERS

ENDORSED BY FRANK HAWLEY'S DRAG RACING SCHOOL. ACCEL ULTRA-LITE STARTERS ARE THE TOUGHEST AND MOST RELIABLE STARTERS AVAILABLE.

If ACCEL Ultra-Lite Starters can take the day-to-day beating of relentless use/abuse at Frank Hawley's Drag Racing School, they can keep you in the race too. Get the starter that hundreds of racers demand – ACCEL Ultra-Lite.

DARE TO COMPARE

ITEM	ACCEL'S STARTERS	IMPORT "CLONE"
ARMATURE	Fully epoxy-encapsulated for better resistance to heat and vibration Balanced Reinforced tooth strength	Thin coat of epoxy, less heat resistance Not balanced Not reinforced tooth strength
BEARINGS	High-quality ball bearings	Mixed brands used, rough when turned
BRUSHES	Long-life carbon brushes, extra length	Carbon brushes, shorter length
BRUSH HOLDER	High spring tension; ensures contact with commutator	Low spring tension; gives poor contact with commutator
DRIVE ASSEMBLY	Minimal amount of end play	Considerable amount of end play
FIELD COIL	High-temperature resin-encapsulated and cotton tape wrap insulated for better resistance to heat	Thin resin coat, less heat resistance
POLE CORE SCREWS	High grade bolts	Low grade bolts
YOKE	Thicker gauge steel	Thinner gauge steel

ULTRA-TORK

STARTERS & ALTERNATORS

191101C

ULTRA-TORK STARTER FOR COMPETITION USE :

- Delivers ultra-high torque levels required to start the most powerful racing engines.
- Unique, new low amp draw Ultra-Tork field coils, drive gear assemblies, and precision balanced armatures.
- Permanently lubricated Olite drive end bushing.
- Includes chrome-plated Ultra-Tork solenoid.
- Attractively finished in "ACCEL Yellow" lacquer.

Ultra-Tork Starter191101C

STARTERS & ALTERNATORS

40100C

ULTRA-TORK SOLENOID

- Initiates high contact impact for positive starter action under the most severe conditions.
- Continuous 100% copper windings to develop maximum magnetic force.
- Corrosion resistant high strength stainless steel plunger provides smooth starter engagement.
- Solid copper contact disc reduces voltage drop and battery drain.
- All-copper contact bolt ensures full plunger pull-in capability.
- GM version attractively chromed; Ford version in high-lustre black phenolic.

Ultra-Tork Solenoid40100C

STARTERS & ALTERNATORS

2842

UNIVERSAL-FIT BATTERY CABLE KIT

- Includes 20 feet of 2 gauge multi-stranded high-grade battery cable.
- Also includes cable lugs for positive connection.
- Just cut to length and attach terminals.
- Designed for trunk-mount applications.

Battery Cable Kit with cable lugs only 2842

ALTERNATORS

STARTERS & ALTERNATORS

8080

RACING ALTERNATORS

Choose from four purpose built alternators designed and built for street and racing applications. All are self regulating 1 wire systems.

RACING ALTERNATOR

12V 80 Amps, 8 pounds, large in-board bearings, dual internal fans, external brushes and HD rectifier, self-regulating load sensing internal regulator (1 wire system).

Racing Alternator 8080

8081

STARTERS & ALTERNATORS

GM 10SI STREET/RACING ALTERNATOR

12V 63 Amps, internal regulator (1 wire system), HD bearings, turbo baffled fan, computer balanced rotor, high copper content brushes. Alternator weighs 10 pounds.

GM 10SI 8081

8082

GM 12SI RACING ALTERNATOR

16V 94 Amps, self regulating load sensing internal regulator (1 wire system), HD bearings, turbo baffled fan, computer balanced rotor, high copper content brushes. Alternator weighs 11 pounds.

GM 12SI 8082

LATE MODEL FORD STREET/RACING ALTERNATOR

Including 1995-88 5.0L Mustang 12V, 130 Amps, High RPM rated internal regulator, dual internal fans, HD "race" ABEC 6 bearings, computer balanced & epoxyed rotor. Alternator weighs 14 1/4 pounds.

COLD AIR KITS	204
POWER FILTER APPLICATIONS.....	206-225
CROSS REFERENCE CHART	226

REPLACEMENT POWER FILTERS

ACCEL PowerFilters™ utilize the same filtration material used by winning off-road and motorcycle racers for years. Now available for direct replacement in passenger cars and light trucks, PowerFilters™ provide increased airflow for more power and improved filtration for extended engine protection.

WHY ACCEL POWERFILTERS™

As with installing a larger carburetor or adding a turbo-charger or supercharger, increasing the amount of intake air available to the engine increases its potential horsepower. ACCEL's reticulated, open cell polyurethane foam is especially designed for high flow filtration. More air can flow through the PowerFilter™, it does not depend only on its surface for filtration, but traps dust and dirt throughout its entire "depth" or thickness. Therefore, the PowerFilter™ can be designed with much less airflow restriction compared to paper filters.

PowerFilters™ are equipped with two stages of filtration material. An outer layer of coarser foam traps larger dirt particles while maintaining extremely high airflow. An inner layer of finer foam stops the smallest particles (to 3 microns in diameter) from entering your engine. Foam strand spacing is precisely controlled during manufacturing to ensure maximum airflow and optimum filtration.

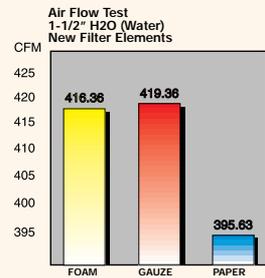

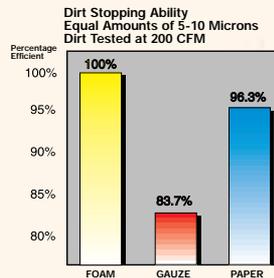

PowerFilters™ are washable and reusable. When cleaning is required, the foam element can be removed from the steel frame (round element only) and washed in any grease cutting liquid dishwashing detergent or our Foam Filter Cleaner P/N 71010. After rinsing and drying, just re-oil the element with ACCEL's flame retardant Foam Filter Oil P/N 71000. Once the filter is washed and re-oiled, it's as good as new!

ACCEL POWERFILTERS™ MAXIMUM FLOW, MAXIMUM POWER!

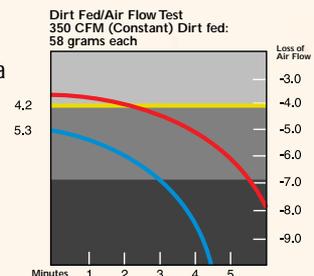

Proven to offer the highest air flow and the best engine protection available.

ACCEL PowerFilters were put to the test and proven to make your engine come alive with more power! Independent laboratory tests have shown ACCEL PowerFilters to flow as well as gauze filters, and much better than paper filters. In fact, they were proven to be unparalleled at stopping dirt.

Priced substantially lower than comparable gauze filters, ACCEL PowerFilters provide the best value, highest air flow and the best engine protection for your money.

We tested the advanced technology of dual stage foam vs. cotton gauze on a 1998 Pontiac Trans Am 6-speed with a Borla cat-back exhaust system on our Dynojet Model 248C chassis dynamometer, and here are the results!

PAPER FILTER	288 hp @ 5,500 RPM	303 ft/lbs @ 4,200 RPM
GAUZE FILTER	292 hp @ 5,700 RPM	306 ft/lbs @ 4,400 RPM
ACCEL PowerFilter	294 hp @ 5,600 RPM	307 ft/lbs @ 4,400 RPM

ACCEL'S LIFETIME WARRANTY

All ACCEL PowerFilter™ air filter elements are warranted against defects in materials or workmanship. This limited Lifetime Warranty covers the original PowerFilter™ purchaser for as long as he or she owns the vehicle on which the filter is originally installed. Unlike other filter warranties, ACCEL does not limit its PowerFilter™ warranty to exclude off-road or racing usage. Each PowerFilter™ package contains a warranty registration card that must be forwarded to ACCEL; the card also contains a complete explanation of the limited Lifetime Warranty.

TPI POWERFILTER FOR GM TPI AND ACCEL SUPER RAM SYSTEMS

Accel's open cell reticulated low restriction dual stage foam PowerFilter for GM TPI V8's allows removal of OEM duct work for better airflow. Also fits ACCEL SuperRam Injection Systems.
GM TPI V8 1991-90 and ACCEL SuperRam Fuel Injection Systems72100

FOR OPEN ELEMENT AIR CLEANERS

ACCEL's open cell reticulated dual stage foam PowerFilter elements for direct replacement in aftermarket and original equipment open element air cleaners.

DIAMETER	HEIGHT

COLD AIR KITS

REPLACEMENT POWER FILTERS

FEEL THE BLAST!

WITH ACCEL'S NEW COLD AIR KITS

Talk about a product that blows away the competition! The new ACCEL by Lingenfelter SuperTube cold air induction kits provide over 50% increased air flow – a 25 HP increase over stock on an LPE 383 engine. Designed by John Lingenfelter and used on his engine packages, these kits feature flow bench, dynamometer and a track-tested design to deliver maximum air flow. Also, a larger air filter with more surface area than any other brand on the market is included to provide the best filtration protection available for your engine.

ACCEL SuperTube cold air kits were designed by professional engine builder and NHRA champion John Lingenfelter, so you can have confidence that they are the highest flowing, highest quality kits money can buy.

- Flow bench, dynamometer, and track tested design
- High temperature, original equipment type material and molding process
- Designed by John Lingenfelter, used on his engine packages
- Over 50% increase in air flow
- 50 state emissions legal
- Easy to install
- Larger air filter with more surface area than other designs (Maximum protection for your engine)
- Over 25 HP increase over stock on an LPE 383 for part #s 74100, 74101

1993 Camaro/Firebird	74101
1997-94 Camaro/Firebird	74100
1998-96 Small Block Vortec Chevy Trucks	74090
1998-96 Big Block Vortec Chevy Trucks	74091

The ACCEL by Lingenfelter SuperTube cold air induction kits are the highest flowing, highest quality kits available. Dyno testing part # 74100 by Lingenfelter Performance Engineering has shown over a 25HP increase over stock on an LPE 383 engine. ACCEL SuperTube cold air kits are designed for maximum flow and the best filtration protection available by using a larger air filter with more surface area than the competition.

**INSIST ON THE BEST –

ACCEL DFI

ENGINE MANAGEMENT SYSTEMS

ENGINE MANAGEMENT INSTALLATION CENTERS (EMIC'S)

ACCEL invested huge financial resources and dedicated manpower to develop integrated engine management systems. To provide qualified installation and calibration services for the more complex ACCEL systems a network of authorized EMIC's (Engine Management Installation Centers) have been established. Your satisfaction has been, and will continue to be a primary objective. EMIC installers are usually established performance machine shops or aftermarket installers; individuals accustomed to working on high dollar, one of a kind vehicles.

Many already have extensive fuel injection experience. All prospective EMIC's attend an intensive training session, where they become familiar with ACCEL engine management system theory, examine and discuss the products, and get hands-on experience with system calibration.

Step Up To The Latest Technology and Feel the Power!

ACCEL/DFI's Electronic Spark/Fuel Management systems combined with ACCEL's throttle bodies, injectors, induction and fuel system components, give you unmatched performance and reliability. With intelligent fuel management, ACCEL/DFI adds horsepower and torque, increases throttle response and maximizes fuel economy.

CALMAP software allows you to custom calibrate both the fuel and spark curves specifically to your engine's requirements - whether it's monster cubic inches, high-revving multi-valve, normally aspirated, supercharged, turbocharged or a heavy nitrous breather!

So whether you're blasting down the quarter mile, pounding the off-shore surf, crossing an off-road trail, cruising the streets or towing a trailer, you need the best fuel injection system - ACCEL/DFI. Unparalleled race winning performance - track-proven by thousands of satisfied customers.

ACCEL-The FIRST word in ACCEleration

DFI-The ONLY name in proven Digital Fuel Injection

Ultimate Driveability and Reliability from ACCEL/DFI

If you're looking for the latest technology in electronic fuel management, look no further! ACCEL/DFI provides excellent driveability, reliable performance and has sold the most programmable engine management systems currently in use!

Just ask Mark Stielow, owner of the 1996 Hot Rod Car of the Year (pictured to the left):

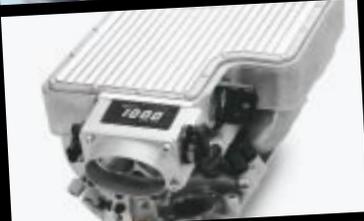

"My ACCEL/DFI system enabled my 1967 Camaro to achieve over 18 MPG during a leg of the Hot Rod Powertour. Amazing when you consider it was powered by a 532 CID Big Block. ACCEL/DFI allows me to dial in fuel curves through my laptop computer to maximize economy and power. I used ACCEL/DFI on my car when it had a 600+ HP small block and achieved excellent results. For the ultimate in reliability, driveability and performance, DFI is the only way to go!"

John Lingenfelter, one of ACCEL/DFI's EMIC's believes in ACCEL/DFI:

"For street and race applications, ACCEL/DFI systems are hard to beat. They have several thousand ECU's in the market and an excellent installation channel through their EMIC (Engine Management Installation Center) program. As one of their EMIC's, I see the value of digital fuel injection and the tremendous benefits it produces over carburetors. ACCEL/DFI gives you improved driveability, better fuel economy, and a broader torque curve, which adds up to a winning product."

Note: All systems sold unpolished.

1996 HOT ROD CAR OF THE YEAR

DARE TO COMPARE

ACCEL DFI FUEL INJECTION

After extensive R&D testing, we've created several fuel injection systems for your Chevrolet powered vehicle that produce substantial increases in torque and horsepower over factory and aftermarket induction systems. For higher RPM applications, ACCEL has a single plane multi-port kit for square and oval port big block Chevy engines. This system has all the advantages of electronic fuel injection with the flow characteristics of a high rise manifold, tuned to enable motors to run up to 7500 RPM's. For custom applications, ACCEL has a variety of fuel injectors, pumps and ECU's which can be tuned to many of your specific applications. ACCEL also has the only camshafts specifically designed for use with fuel injected small block and big block engines. Whether your vehicle is racing, towing, off-road or street machining, ACCEL has the fuel injection systems and components for you!

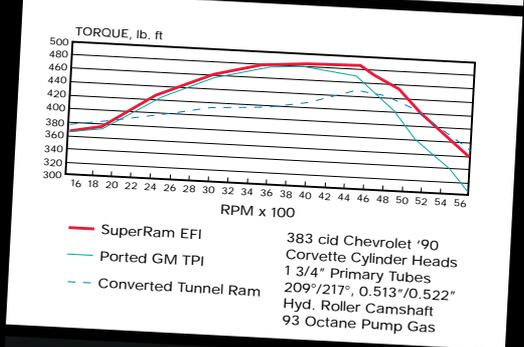

Note: All systems sold unpolished.

SMALL BLOCK SUPER RAM

BIG BLOCK CHEVY SUPERRAM

BIG BLOCK "STEALTH" OVAL PORT

new

SMALL BLOCK PRO-RAM

Low cost, fully programmable EFI by DFI is here. Introducing the ProRam Single Plane Small Block Multi-Port Spark/Fuel Management. The new system is available with a cast 750 CFM throttle body, single plane intake manifold, and 30 #/hr injectors for engines producing up to 500HP. For engines producing over 500HP, the system is available with 36#/HR injectors and a billet 1200 CFM throttle body. The manifold, designed by John Lingenfelter, produces excellent power from 2000 RPM to 6500 RPM, has optimized runners for precise air delivery and correct fuel distribution.

The system includes intake manifold, throttle body, injectors, ECU, fuel pump, wiring harness, and all components necessary for installation.

SUPER RAM SMALL BLOCK

SMALL BLOCK CHEVROLET SUPERRAM™

Converts Carbureted Small Blocks to Multiport Electronic Fuel Injection.

- Improved Performance, Driveability, and Economy.
- More Power than OEM-Style Tuned Port Injection Systems.
- EGR Availability for Emissions Control Capability.

ACCEL's electronics expertise and John Lingenfelter's small block Chevy product development background have teamed up to build the most powerful small block Chevy multiport fuel injection system available anywhere.

Using a tuned plenum/runner combination, SuperRam Small Block provides a balanced inlet air charge to all eight combustion chambers. In addition, the SuperRam's resonant pressure wave (producing the "ram effect") is designed to occur at higher RPM. When the OEM TPI manifold is beginning to run out of steam, ACCEL's SuperRam starts to shine. At 4500 RPM the stock unit's torque has already started to drop off. ACCEL's SuperRam produces 19 ft-lbs more than a ported OEM manifold at 4500 RPM at higher RPMs. The performance gap then increases further. At 5800 RPM, SuperRam generates 61 ft-lbs more than the ported OEM manifold. (See Torque Curve, right)

SuperRam Small Block is equipped with EGR capability for late model applications.*

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 74043I IPU modification on page 237. If computer controlled ignition timing is not desired, only RPM signal is required.

NOTE: CALMAP Software not included; See page 236 for CALMAP applications.

*Recommended for 350 c.i.d. or larger

STREETRAM SMALL BLOCK

STREETRAM

Upgrade to maximum TPI performance! If you're into performance fuel injection, we've got your system! ACCEL's complete line of StreetRam bolt-on TPI upgrade components can transform your machine into a 50-state-legal powerhouse. Developed with the assistance of tuning wizard John Lingerfelter, these components maximize torque and horsepower while maintaining environmental friendliness.

There's a 1,000-CFM billet throttle body, high-flow plenum, free-breathing runners, and the heart of the system, our max-flow manifold base. Each component may be installed separately, or as a complete StreetRam assembly for maximum TPI performance. Best of all, these goodies are completely compatible with your OEM computer. Switch to Tuned Port Injection! If you own a carbureted or throttle-body injected car or truck and want the tire-spinning torque and horse-power of TPI, the StreetRam system is available, complete with computer, wiring, fuel pump and all hardware for an easy, legal conversion.

StreetRam systems and components are recommended for small-block Chevy engines up to 377 cubic inches, get SuperRam for big-inch engines! Larger displacement Small Block applications require our Lingerfelter Signature SuperRam components, the ultimate big-inch, high-rpm Tuned Port Injection. At ACCEL, we promise the ultimate-and we deliver!

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 740431 IPU modification on page 237.

If computer controlled ignition timing is not desired, only a RPM signal is required.

Note: Calmap Software not included; see page 236 for Calmap applications.

PRORAM BIG BLOCK

1000 AND 1200 CFM MULTI-POINT SPARK FUEL MANAGEMENT SYSTEM

ACCEL is now offering a system using the new cast high rise single plane multi-port intake for Big Block Chevy's with oval and rectangular port heads. This system offers all the advantages of electronic fuel injection plus the flow characteristics of a high rise manifold, tuned to enable motors to run up to 7500 RPM's. The complete programmability of the system along with the capability of closed loop operation offers tremendous versatility. For both fuel and spark control, an HEI computer controlled distributor is recommended (non-computer controlled HEI distributor can be used for fuel only control). This system is intended for off road use with emission exempt vehicles. A minimum of 12-1/2" is needed for height clearance. System includes: ECU, Main and Injector Harnesses, Manifold, 8-36 lb per hour Injectors, Fuel Rails and Lines, Pressure Regulator, Fuel Pump, Fuel Filter, 1000 CFM Throttle Body, Air Filter, Plenum Adapter, Sensors: (Coolant Temp., Air Temp., TPS, Oxygen, MAP), IAC Motor.

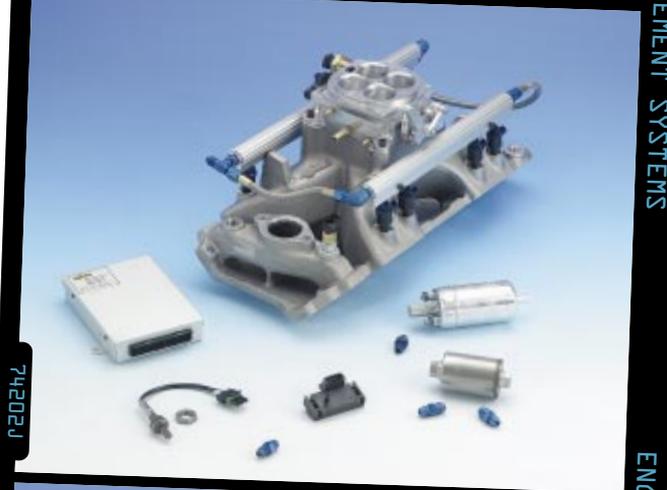

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 74043I IPU modification on page 237. If computer controlled ignition timing is not desired, only a RPM signal is required.

BIG BLOCK CHEVROLET RECTANGULAR PORT & OVAL PORT CONVERTS TO MULTIPOINT ELECTRONIC FUEL

- Increased HP & Torque
- Crisper Throttle Response
- Improved Fuel Economy

Now, big block Chevy owners can enjoy the advantages of electronic fuel injection. Short runner, "SuperRam" intake manifold plenum and runners are designed to maximize horsepower in the 3500 to 6500 RPM band. Multipoint injection virtually guarantees equal fuel distribution to each cylinder for improved power and fuel economy.

Utilizing the accuracy of microprocessor-based digital electronics, fuel delivery is precisely metered, constantly monitoring engine conditions and optimizing air-fuel mixture at the injectors.

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 740431 IPU modification on page 237. If computer controlled ignition timing is not desired, only a RPM signal is required.

ENGINE MANAGEMENT SYSTEMS

ENGINE MANAGEMENT SYSTEMS

STEALTH BIG BLOCK

BIG BLOCK CHEVROLET "STEALTH" OVAL PORT

- Specifically designed for superior low-end and midrange torque.
- Especially suited for tow vehicle, RV, and marine applications.
- Improved fuel mileage for economical performance.
- EGR equipped for emissions control capability.

When the time arrived to develop our Stealth big block Chevy fuel injection system, ACCEL engineers solicited the intake manifold development expertise of John Lingenfelter, NHRA champion, premier engine builder, and designer of highly innovative performance parts for Chevrolet engines.

The result was "Stealth", a stump-puller of a manifold matched to ACCEL's electronic fuel injection controls. Especially effective off-idle to 4500 RPM, "Stealth" increased torque by up to 90 ft.lb at 3500 RPM (see graph to the right). Power, economy, and driveability are dramatically improved when "Stealth" is installed on tow vehicles, recreational vehicles (RV's) and boats.

The only compatible distributors that will fit this system is the GM Remote Mount Coil Computer Control HEI Distributor or ACCEL BilleTech part no. 60109 and 60110.

"Stealth" is equipped with EGR (Exhaust Gas Recirculation) ports for vehicles originally equipped with EGR. The kit also contains an EGR blockoff plate for non-EGR applications.

"Stealth" systems can be calibrated using ACCEL's CALMAP software and a PC or laptop computer.

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 74043I IPU modification on page 237. If computer controlled ignition timing is not desired, only a RPM signal is required.

ENGINE MANAGEMENT SYSTEMS

4 BARREL THROTTLE BODY

GM 4 BARREL TBI SPARK FUEL MANAGEMENT SYSTEM

With the implementation of electronic fuel injectors in the automotive industry, many vehicles with carburetors or inadequate TBI systems lack the power, fuel economy or driveability to provide dependable service and performance.

To improve on these inadequacies, ACCEL now has a Throttle Body Injection (TBI) Spark Fuel Management System for systems that operate in closed loop for optimum mileage, while reaping the benefits of this impressive 4 bbl, 750 CFM throttle body.

Pre-calibrated for a 350 cid engine, up to 300 hp, it can be calibrated for other applications with the CALMAP calibration software. For ignition control, in addition to fuel control, an HEI Computer controlled distributor is recommended (non-computer controlled HEI distributor can also be used for fuel only applications). For convenience, this aluminum throttle body will bolt to a standard 4 bolt carburetor flange manifold. System includes: ECU, Main and Injector Harness, Throttle body assembly with gaskets, Air Cleaner, Fuel Pump, Fuel Filter, Coolant Temperature Sensor, Air Temperature Sensor, TPS, MAP Sensor, IAC Motor, Oxygen Sensor w/nut, Linkage Hardware.

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI ignition system, see 74043I IPU modification on page 237. If computer controlled ignition timing is not desired, only RPM signal is required.

CALMAP PROGRAM ENGINE MANAGEMENT CONTROLS FOR SPECIAL APPLICATIONS

A user-friendly calibration tool that allows anyone with a basic understanding of engine tuning to recalibrate ACCEL SuperRam Fuel Injection Systems, ACCEL Electronic Spark Fuel Management Systems for specific engine combinations. With CALMAP, access and change any table within ACCEL ECU's. Calibration can be performed on engine dyno or "on the fly" (in the vehicle under actual driving conditions). Calibrations may be saved in computer file to be stored, or changed and reused as often as desired. No PROM's to burn in order to change fuel delivery and spark timing-calibration. The digital ACCEL ECU's allow CALMAP direct user interface of fuel injection and ignition system controls to accommodate virtually any engine components selected. CALMAP software package includes: 3 1/2" Software Floppy Disks, Serial Interface Cable, CALMAP Instruction Booklet.

CALMAP Software with 25 ft. Cable	74990L
CALMAP Software w/5 ft. Cable	74990S
CALMAP Software Only,V6.32	74990N

CALMAP calibrates fuel and ignition systems only in SuperRam and EFM ECU's.

Note: All systems sold unpolished.

Products on this page are not legal for sale or use on California pollution-controlled motor vehicles.

74135

CALMAP can be used with any PC or laptop computer with the following features:

- DOS (Version 2.11 minimum)
- RS-232 serial port
- 3 1/2" disc drive
- CPU speed - 25-166 MHz
- 200 x 640 pixel display capability

CALMAP software package includes:

- 3 1/2" Floppy Disks
- Serial Interface Cable
- CALMAP Instruction Booklet

ELECTRONIC SPARK/FUEL MANAGEMENT SYSTEM

INSTALL MULTI-POINT FUEL INJECTION ON CARBURETED ENGINES!

ACCEL's Electronic Spark/Fuel Management Systems include the electronic components required to install Multipoint Fuel Injection on carbureted engines. ACCEL converts the mass air flow systems to "Speed-Density," eliminating the restrictive mass air flow (MAF) sensor and adding several horsepower.

Closed Loop Systems include a heated oxygen sensor for placement in the exhaust header or manifold, providing exhaust gas information to the ECU which then continuously adjusts injector pulse width for optimum air-fuel mixture, peak part-throttle performance, and maximum fuel economy.

If computer controlled ignition timing is to be utilized without the use of a GM style computer controlled HEI or Ford style computer controlled Thick Film ignition, see 74043I IPU modification on page 237.

If computer controlled ignition timing is not desired, only a RPM signal is required.

CALMAP, ACCEL's calibration software may be used with a PC or laptop computer to recalibrate ACCEL ECU's for maximum performance with specific engines.

CLOSED LOOP SYSTEMS

The following include ECU, Main Harness, Injector Harness, 1 Bar MAP Sensor* and Heated Water Sensor:

350 cid Chevrolet - Auto/RV	74022A
350 cid Chevrolet -Marine	74022M
350 cid Chevrolet LT-1	74022L
383 cid Chevrolet	74023
400-406 cid Chevrolet	74024
Buick GN/Turbo V6	74025
289-302 Ford	74030
Universal 4,6,8 Cyl. - Auto/RV	74040A
Universal 4,6,8 Cyl. - Marine	74040M

*2 and 3 Bar MAP Sensors are also available at extra cost for turbocharged and supercharged applications.

3 STAGE NITROUS ECU MODIFICATION

The factory can now upgrade a single stage nitrous ECU to 3 stage capabilities. This has become such a popular feature that we had to offer it under its own part number.

3 Stage Nitrous ECU Modification 74043

INDUCTIVE PICKUP MODIFICATION

The 74043-I modification needs to be ordered with an ACCEL Control System if timing control is to be utilized when using an aftermarket crank trigger or aftermarket magnetic pickup distributor without a mechanical or vacuum advance. This modification requires the use of an aftermarket ignition enhancer box, like the ACCEL 300+ system.

Inductive Pickup Modification 74043I

Note: All systems sold unpolished.

Products on this page are not legal for sale or use on California pollution-controlled motor vehicles.

INDUCTIVE PICKUP ECU

ACCEL now offers their work horse ECU to be compatible with crank trigger and inductive pickup distributors. The timing can now be mapped and is controlled by the points wire on ACCEL and/or MSD ignition systems.

Inductive Pickup ECU 74042

POWERTUNER™ ADJUST IDLE AND WIDE OPEN THROTTLE FUEL MIXTURE FROM THE DRIVER'S SEAT!

The PowerTuner module plugs directly into the main wiring harness of the SuperRam EFI and ACCEL Electronic Spark Fuel Management Systems to provide the driver with on-board fine adjustment of idle and wide open throttle air-fuel mixture. ACCEL's use of electronic controls has eliminated dirty hands from the power-tuning process. Consider turning the IDLE knob as turning a carburetor's idle mixture screws and turning the WOT (Wide Open Throttle) knob as changing carburetor main jets. MAP and TPS lights illuminate in the event of a sensor failure indicating that the ECU has gone to "limp home" mode.

NOTE: Cannot be used with original equipment or ECU.

PowerTuner 74500

74500

AIR/FUEL RATIO METER WITH OXYGEN SENSOR

This unit is an excellent tuning aid for immediate response to air/fuel mixture changes. The 9 LED's provide a wide range of operational information in order to tune any engine management system for any size engine using unleaded fuel. Mounts conveniently on the dash or in the passenger compartment. Includes air/fuel monitor, harness, oxygen sensor and mounting nut.

Air/Fuel Ratio Meter with Oxygen Sensor 74550

Air/Fuel Ratio Meter w/o Oxygen Sensor 74551
(For Unleaded Fuel Only)

74550

VARIABLE INJECTOR CONTROLLER

ACCEL INTRODUCES VARIABLE INJECTOR CONTROLLER (VIC)

new

ACCEL now offers an option for existing DFI systems that allows individual cylinder fuel control, and the ability to use high flow, low impedance injectors with the standard DFI batch fire ECU.

The Variable Injector Controller (VIC), will also work with the following ECU's:

- 1991 or earlier GM batch fire ECU
- 1993 or earlier Ford Batch Fire ECU
- Haltech Batch fire
- Motec batch fire

The Variable Injector Controller (VIC) is sold complete with a plug in harness for use with DFI batch fire ECU's, and allows individual cylinder fuel to be trimmed by up to 25% by adjusting one of the eight injector control knobs mounted on the module. No need for a laptop computer for tuning individual cylinder fuel trim.

Variable injector controller (VIC) 74070

FUEL INJECTORS

INJECTORS

These are ACCEL's highest flowing, high impedance injectors. Still compatible with the OE computer injector drivers.

They also provide excellent atomization of the fuel, improved fuel economy and throttle response. The Performance Injectors are also the new anti-plugging type which will eliminate problems that were once associated with carbon build up.

Chevrolet 305 TPI, 8/set	74601
Ford 302 HO, 8/set	74603
Buick Grand National V6, 6/set	74604
Chevrolet 350 - 383 TPI, 8/set	74605
Universal to 500 HP, 8/set	74606
36 lb/hr. Injector Pack, 6/set	74614
36 lb/hr Injector Pack, 8/set	74615

Due to the low impedance of the injectors below, they need to be driven (controlled) by 1-4 AMP/1 AMP injector driver per injector such as in the ACCEL Sequential Engine Management System or the Accel Variable Injector Controller (VIC). When used with the correct ECU they will produce excellent idle stability and tremendous power.

55 lb/hr Universal Injector, up to 950 H.P. . .	74612
72 lb/hr Universal Injector, up to 1200 H.P. .	74616
83 lb/hr Universal Injector, up to 1400 H.P. .	74607

74601

The following equation can be used as a guide to select the proper ACCEL Performance Injectors:

$$\text{lb/hr (fuel)} = (\text{Max. HP} \times \text{BSFC}) / (\text{number of injectors})$$

where: • Max. HP is a realistic horsepower estimate or known value from dyno testing;

- BSFC is Brake Specific Fuel Consumption. Typically, BSFC for a normally aspirated (unblown) engine will be 0.45. For a turbocharged or super charged application, use BSFC = 0.55. Dyno testing can provide exact BSFC data.

- Number of injectors should be one per cylinder, if possible. For high horsepower applications, two injectors per cylinder is also acceptable.

Example: 383 cid Chevrolet 8 cylinder
 350 HP
 TPI multiport Injection
 $\text{lb/hr} = 350 \times 0.45$

Note: The 55 lb/hr and 83 lb/hr injector should only be used with the SEFI system.

EFI BY DFI

MAXIMIZING YOUR
PROGRAMMABLE FUEL
INJECTION SYSTEM.

BY RAY T. BOHACZ
REPRINTED FROM HIGH-TECH PERFORMANCE

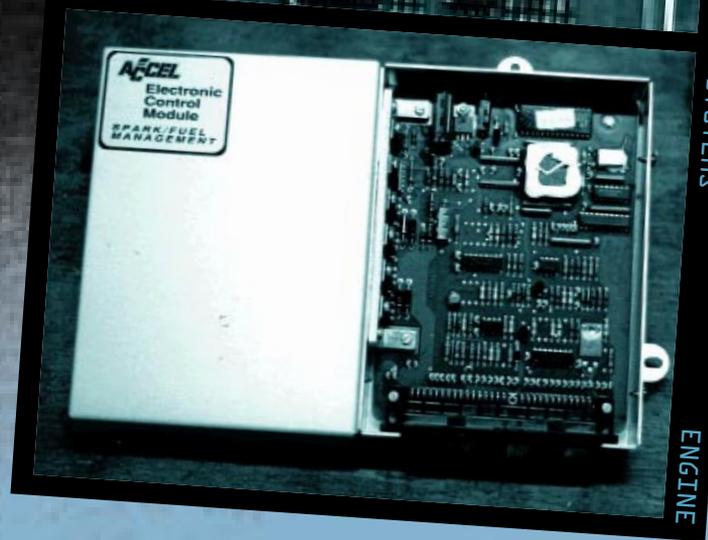

The arrival of fuel injection on performance cars in the mid 1980s not only spawned the renaissance of the musclecar, but created a whole new segment of the industry, the programmable ECU. Since this issue of HTP is focusing on aftermarket ECUs, and the ACCEL DFI ECU is one of the most prolific and popular aftermarket upgrades, we felt that it would be only appropriate to showcase it with an in-depth article dedicated to DFI tuning.

WHY DFI?

As enthusiasts recognized the performance potential in the then-new Buick GNs, 5.0 Mustangs and GM TPIs, and as a myriad of go-fast parts hit the marketplace, the inability of the factory ECU to accept these modifications became apparent. As good as the OE ECU is, its strength became its weak point: The complicated and proprietary programming that was necessary for the manufacturers to gain EPA compliance became their bane when aggressive cam profiles, high-flow cylinder heads and large injectors were introduced to the engine. The inability of the tuner to access the fuel and spark tables in the factory ECU left scores of potentially fast cars with pitiful performance, which forced some owners to revert to carburetors. In response to this dilemma, ACCEL developed and brought to market one of the first affordable, user-friendly and, most important, "on the fly" tuning-programmable ECUs. It developed a software that could only be used on its engine management systems called CalMap, which allowed the end user

to tune the complete fuel and spark tables without a degree from MIT in computer technology. It also presented opportunities for increased power production by eliminating the common MAF sensor, which proved to be a restriction in large-cubic-inch engines. The deficiency of most factory ECUs was also corrected by the employment of four peak-and-hold drivers in lieu of the customary two saturated drivers that most OE management systems incorporate. This allowed the DFI the ability to control low-resistance high-flow injectors, enabling the fuel system to support huge horsepower numbers.

Another industry breakthrough developed by ACCEL with its DFI unit was the integration of programmable dry-flow nitrous, something that had never before been accomplished. It was the ability to add nitrous independent of the fuel, along with the accuracy of adding the needed enrichment through the injectors and controlled by the DFI, along with the luxury of a programmable amount of timing retard and engagement delay. This system

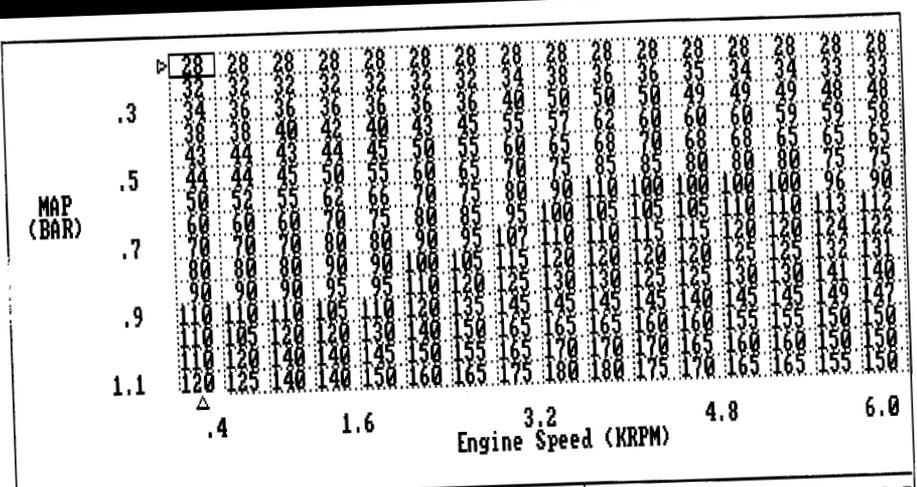

ENGINE MANAGEMENT SYSTEMS

ENGINE

Photography by Richard A. Lentinello

Note: The acronyms CalMap and DFI are both registered trademarks of the Mr. Gasket Performance Group Inc.

The base fuel map is scaled so that the horizontal axis represents rpm, and the vertical designates load. If configured for 1-, 2- or 3-bar, the resolution of the load side of the map is reduced proportionally.

1.79	Base Pulse Width (mS)	.006	O2 Sensor Volts	12.7	14.7	16.7
			Open Loop Air/Fuel			

completely did away with the fuel distribution problems caused when fuel is administered behind the throttle plates of a dry-flow long-runner intake manifold and removed a great deal of complexity from a nitrous installation.

WHERE TO START?

An ACCEL/DFI is a rarity in that it is not only a performance part but a tool. As with any tool, it is only as effective as the operator's skills allow. To tune the DFI encompasses a multi-step process you need to be familiar with the CalMap software, and you need to be able to recognize what the engine needs.

The first part is easier, thanks to the CalMap's menu-driven design and ease of execution. The second part is a little more complex. Anyone can buy a laptop computer and the calibration software and consider himself a tuner. Properly tuning a late-model fuel-injected engine requires substantial experience, time and patience. One mistake with the keyboard on the laptop and your engine can easily be turned into a pile of junk from detonation or a lean condition.

Our advice to anyone contemplating the incorporation of any one of the programmable ECUs on the market into your engine program is to learn as much about the internal workings of an engine as possible, and learn to respect the delicate balance that needs to be established between air/fuel ratios and timing demands in

regard to maximum engine output. From my years of experience working with the ACCEL/DFI system as well as almost every other programmable ECU on the market, there is a definite pattern to the obstacles and pitfalls that a novice tuner faces. Due to space constraints, I will touch on just some of the main areas of tuning.

SOFTWARE VERSIONS

Before our discussion of the prescribed tuning procedures, let's establish that due to a continual refinement process that ACCEL uses with all its products, there are different versions of CalMap in the field, depending on the date of purchase. All of this text is referenced from the 6.32 version, the most current as of late September 1997. If you have outdated software, you can purchase an updated disk from anyone of more than 100 ACCEL EMIC centers nationwide.

WORKING WITH CALMAP

Even though CalMap offers more than 30 different screens, the majority of your tuning will be done in the base fuel map and ignition timing screens once your configuration is established in the global function.

When in the global function Configure ECU, it is important to use this screen to its fullest extent. A common error in this section is choosing too large a base fuel map cell size. Ideally, when determining the size of the base fuel map's rpm resolution, you

EFI BY DFI

want the cell widths to be as small as possible, yielding the most tuning set points in the operating rpm range of the engine. To establish this, if we were to configure the map to only 4500 rpm, we would lose any resolution above that rpm figure, but we would gain tuneability where the engine spends its most time, below 4500 rpm. The common mistake is to look for large rpm values on the base fuel map, even though the engine will only see brief excursions to that rpm. A common misunderstanding is that the fuel table will stop issuing injector pulses above the rpm limit of the fuel map. That is incorrect; it will just carry out the last pulse width as the engine's speed eclipses the resolution of the fuel map. For instance, if the fuel map is calibrated to 4500 rpm and the calibrated pulse width at that speed is 10 ms, the ECU will keep issuing pulses of 10 ms at any speed above 4500 rpm. Since most street engines spend very little time in the higher rpm range, my rule of thumb is to configure the base fuel map so that you have an overshoot of 500 rpm to reach the maximum safe engine speed at which power is still being produced.

Another area of controversy is the closed-loop idle hysteresis. Ideally, you want the engine to idle in closed loop, especially if catalytic converter efficiency must be maintained. The situation will arise with headers and the varying placement of the oxygen sensor sample port with different header manufacturers and the sensor's ability to remain accurate. For this reason, ACCEL suggests using only a heated oxygen sensor to keep the output signal accurate (see "Tuning With Oxygen Sensors," ISSUE DATE). Once a camshaft is installed with increased overlap, the reversion of the exhaust back into the header during low engine speeds when poor scavenging is experienced may wreak havoc with the sensor's ability to identify accurately a stoichiometric mixture. In these instances it will be necessary to set the idle program to allow for open-loop status and ignore the sensor's output signal.

BASE FUEL MAP

Entering the base fuel map, it is beneficial to use as many of the 256 set points as possible during tuning. This is established by setting the rpm between cells as stated above. The values in the fuel map are arbitrary units that when multiplied by .0627 will determine the pulse width issued. While looking at the matrix, you will notice that the program as shipped from ACCEL has the

largest fuel commands at the torque peak, and as the engine speed escalates above peak torque the pulse width diminishes. It is common for the novice tuner not to understand that an engine's fuel demand is always highest at peak torque because volumetric efficiency is the greatest there, and in turn the fuel requirements ramp down as peak horsepower is approached in accordance with the diminished cylinder fill rates. When starting your tuning, the base fuel map is where you will spend most of your time. It usually works best to use a building block method of starting from idle, higher rpm no load, idle load (in gear), slight tip-in, part-throttle load and then full load. By engaging the View screen, most values from the ECU's inputs and outputs will be available, analogous to the serial data link on a production GM ECU. While in this mode, it is especially helpful to reference your changes to the fuel map from the amount of correction that the

EFI BY DFI

ECU is commanding to maintain an air/fuel ratio of 14.7:1.

For example, if the amount of O2 correction is stated as -12 percent, then the fuel cells that are at that load and rpm need to be leaned by 12 percent to arrive at stoich. To derive this mathematically, simply take the given matrix value (123 x .88=108.24) and multiply it by the amount of correction needed and input the new number. Keep in mind that CalMap is an interpolative software, and the cells surrounding the actual chosen cell in the fuel map will affect the issued pulse width. In reference to the required air/fuel ratios, you will find that most engines perform best with a mixture ratio of 12.7-12.9 at peak torque and 12.9-13.1 at peak power. During part-throttle light-load cruise, a stoichiometric ratio is desirable. When I write a fuel table I use a feed-forward approach instead of a feedback logic. I strive to get my fuel calculations as near to the stoichiometric set point as possible and use very little, if any, oxygen sensor trim. This is the approach that the OEs use, relying very little on correction. Keep in mind that the

air/fuel ratio monitor on the bottom of the fuel map screen is registering what the mixture would be if it was not driven back to stoich. A value of 13.2 on this scale would represent what the mixture would be if the closed-loop function was disabled with the given pulse widths in the fuel map.

IGNITION TIMING

Along with the complete controllability of the fuel tables, the same authority also lies with the spark tables. The rpm resolution of the ignition map is referenced from the fuel table and is scaled at a rate of 1.5 to the fuel table. The same theory applies to the spark table as the fuel table in regard to keeping the same timing command beyond its rpm resolution.

A common mistake inexperienced tuners make with the ignition profile is setting it much like a mechanical advance would be tuned. The graphic display of the contours of an optimized EST map vs. an analog mechanical advance graph says it all. Most engines want varying amounts of spark lead at different load and rpm levels. This was not easily accomplished with a centrifugal advance mechanism due to the basics of physics. Even though this has been recognized from the beginning of the development of the internal combustion engine, it was not accomplished until the advent of electronic spark control. The best-performing DFI-equipped vehicles have had a great deal of effort put forth in this screen.

If the vehicle has an ESC system installed, the amount of timing retard to end detonation is also displayed on the bottom of the timing map screen. Unlike the oxygen sensor feedback information, this data cannot be used to help determine the optimal spark curve other than that it is recognizing abnormal combustion. To further elaborate on this, see "Detonation" in the DATE issue. The phenomena of the hysteresis of knock establishes that when utilizing a closed-loop timing control system, the amount of retard to stop detonation once it is started in the combustion chamber is disproportionate to the amount of spark lead that would need to be removed from the total timing curve to never allow detonation to start. When working with the timing matrix, an understanding of the design aspects of your particular combination of components will reduce the tuning time immensely, but a trial and error method is still required for the best results. The amount of spark lead time is affected by numerous engine criteria such as: cylinder head combustion chamber design and mixture motion; squish-to-bore relationships; piston design; intake

INJECTOR STATIC CHART FOR SDF

RPM	PW	MATRIX VALUE
3500	17.14	273
3750	16.00	255
4000	15.00	239
4250	14.12	225
4500	13.33	212
4750	12.63	217
5000	12.00	191
5250	11.42	182
5500	10.90	173
5750	10.43	166
6000	10.00	159
6250	9.60	153
6500	9.23	147
6750	8.88	141
7000	8.57	136
7250	8.28	132
7500	8.00	127
7750	7.74	123
8000	7.50	119

Note: For SEFI ECUs use the same matrix values to identify static opening but due to the frequency difference in the firings of the injectors in SDF vs. SEFI the indicated gross pulse width in the VIEW screen will be double the matrix value.

This 3-D interpolation represents the layout of both the fuel and timing matrices in relationship to load and rpm.

manifold runner length and material composition; compression ratio; available fuel; effectiveness of thermal transfer from the cylinder head to the cooling system.

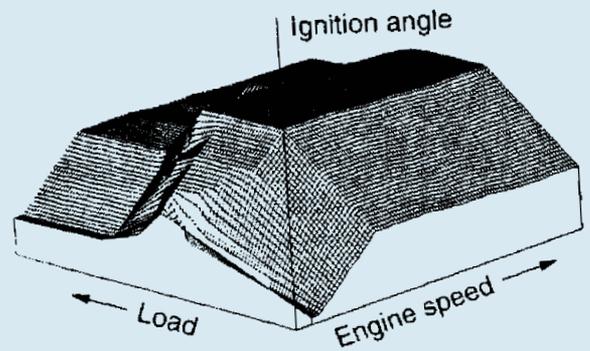

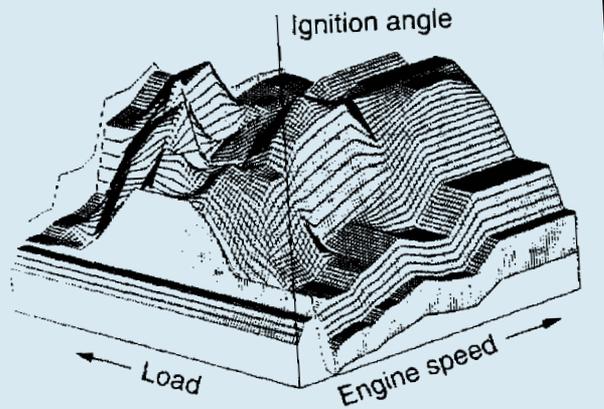

Incorporated in the DFI/ECU is a function that is referred to as Idle Spark. Accessed under the Global file, this allows for a programmable amount of timing to be used in accordance with a predetermined amount of engine idle speed variation to help smooth the idle. This is accomplished by changing the timing command to the ignition module in a rapid-duty-cycle manner. This function is coded on the board to not allow engagement above 1.5 percent throttle angle and under 100° F coolant temperature.

ESTABLISHING A SMOOTH IDLE

One area of difficulty for the novice DFI tuner is achieving a smooth stable idle, especially if increased degrees of overlap are ground into the cam and a large-capacity intake manifold is used. Working under the proviso that the engine is sound mechanically and there are no ignition or air leak problems present, the following steps will usually deliver the desired results.

While working in the base fuel map, keep in mind that injector pulse widths below 2.0 ms are entering the range of unrepeatability, and fuel pressures below 40 lbs. affect atomization and in turn idle quality. Work with all of the cells around the chosen idle cell due to the nature of the CalMap software using the surrounding cells for interpolation. Large variations in matrix values around the idle cell usually lead to surging or rolling idle conditions. It may be necessary to work back and forth between the fuel, spark and idle spark maps to achieve a nice idle quality. Longer runner intake manifolds will historically idle better with less initial spark lead, so if your attempts are hitting a brick wall in regard to idle quality, try pulling some timing out at idle and being less dependent on the Idle Spark function.

Low battery output voltages that usually come in conjunction with improperly sized underdrive pulley ratios will cause extreme idle instability and even stalling as the input voltage to the ECU ramps below 12.2 volts. No amount of tuning will compensate for the decrease in voltage that affects all of the circuits of the engine management system. Air temperature correction functions when exaggerated will also have a negative impact on idle quality.

CONCLUSION

The tuneability of a DFI system allows you to obtain the most performance from your fuel-injected engine regardless of make or modifications. But this adjustability is also a double-edged sword in that it allows you more room for error. If you use some common sense and a chassis dyno session to quantify your changes and allow for repeatable back-to-back runs, you will wonder how you ever got by with the factory computer. Should your engine modifications require the use of a DFI but you don't feel comfortable doing the installation or tuning yourself, ACCEL has the answer with its EMIC program. The engine management installation program is a network of independently owned performance shops that have been selected and trained by ACCEL to sell, service and install its fuel and ignition components. With the popularity of the EMIC program, there is no excuse for not demanding the highest level of performance from your fuel-injected vehicle.

FUEL PRESSURE REGULATORS

ENGINE MANAGEMENT SYSTEMS

74560

FUEL PRESSURE REGULATORS

These premium quality pressure regulators provide stable fuel pressure under the most demanding conditions.

Part No. 74750 and 74753 allow fuel pressure adjustment for increased fuel volume and superior fuel atomization. Stock Ford 5.0L systems operate at 39 psi, while 305 and 350 TPI systems are factory set at 45 psi (except 1985 350 TPI; 39 psi).

FUEL PUMP AND FILTERS

HIGH PRESSURE ELECTRIC FUEL PUMPS

These powerful electric fuel pumps are available from ACCEL in two sizes. The 74702 pump flows 70 gal/hr. at 45 psi for engines producing 420 to 870 HP and operating at 45 psi.

High Pressure Electric Fuel Pump - 870 HP max. 74702
Fuel Pump Mounting Bracket. 74710

400 HP FUEL PUMP

ACCEL now offers a lower cost fuel pump for 500 Horsepower (45 psi) applications. The pump is designed to be installed and comes with its own mounting brackets.

400 HP Fuel Pump. 74701

HIGH PRESSURE FUEL FILTER

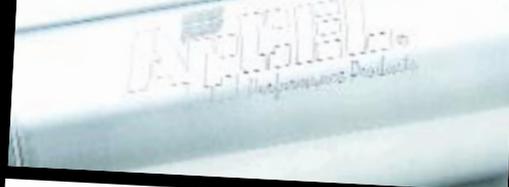

Stainless steel, two piece laser welded construction, ACCEL's high pressure fuel filters can withstand up to 100 psi. These filters trap particles as small as 5 microns and prevent contaminants from obstructing flow or causing fuel injector leakage between pulses.

High Pressure Fuel Filter. 74720

INLINE STAINLESS STEEL FUEL FILTER

ACCEL now offers a high pressure stainless steel fuel filter with integral hose barbs. With the hose barbs, the expensive Saginaw fittings are eliminated.

THROTTLE BODY 1000 CFM!

Bolt on more inlet air flow than any ported, honed, or modified OEM throttle body! This 58mm Lingenfelter designed unit is CNC machined from aluminum billet to precise, leakproof throttle operation. Stock GM throttle blades screw onto a flat surface machined onto the throttle shaft. High airflow entering the throttle body can exert such force as to produce bending and misalignment of the throttle blades. ACCEL solves this problem by using a slotted throttle shaft. As the throttle blades fit into the shaft's slots, clamping force is significantly increased and bending is eliminated. ACCEL also spins the end of the throttle shaft over the throttle linkage for increased durability. ACCEL High Flow Billet Throttle Bodies fit OEM General Motors Tuned Port Manifolds as well as all ACCEL SuperRam Manifolds. Using ACCEL's Manifold Conversion Kit, High Flow Billet Throttle Bodies can be used to convert any carbureted manifold (with Holley bolt pattern) to electronic fuel injection.

ACCEL INTRODUCES LINGENFELTER SIGNATURE SERIES INTAKE MANIFOLD FOR SMALL BLOCK CHEVROLET ENGINES

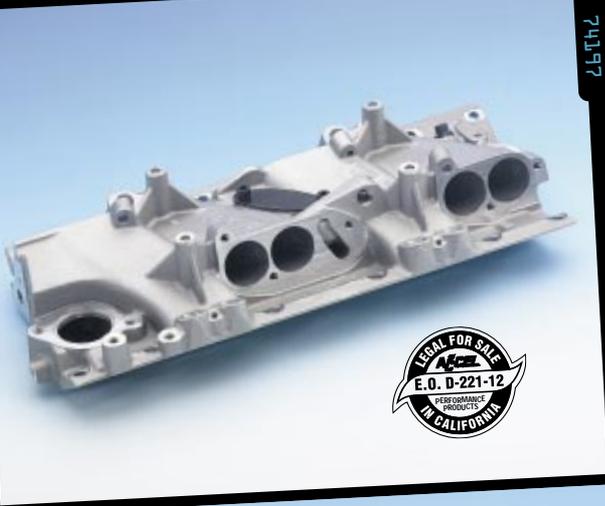

Accel introduce a small block Chevrolet intake manifold for use with either carburetion or port fuel injection. The manifold, designed by John Lingenfelter, produces excellent power from 2000RPM to 6500 RPM, has optimized runners for precise air delivery and correct air distribution, and will fit standard production 23 degree small block Chevy cylinder heads, as well as LT1 and Vortec L31 truck cylinder heads.

Manifold only – S.B. Chev 74140

**HIGH FLOW TPI RUNNERS
INCREASES INLET AIRFLOW FOR
MORE HP AND TORQUE!**

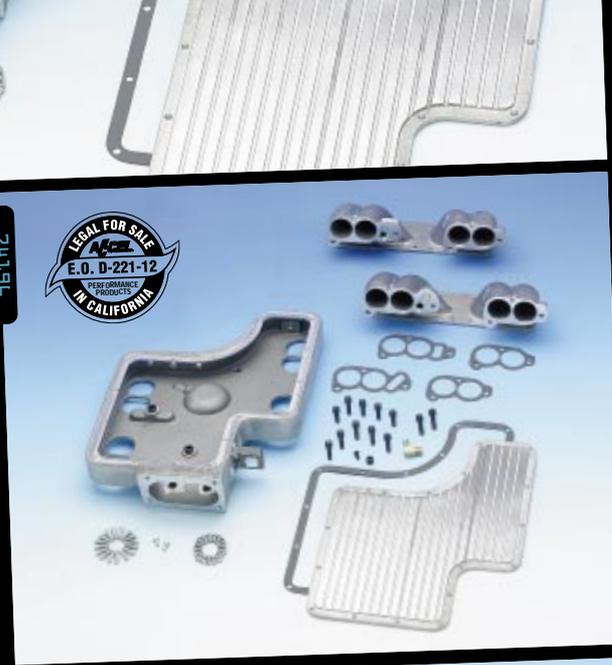

By now, it has become common knowledge that modifying TPI intake runners can significantly affect performance characteristics of the small block Chevy. John Lingenfelter and ACCEL engineers have spent hundreds of hours on the flowbench and at the dyno developing the optimum balance of port volume and velocity to ensure that the ACCEL TPI runner design outperforms any other existing runner design. These new ACCEL castings are precision cast and machined for unequalled port shape consistency and easy bolt-on installation.

ACCEL Runners #74195 are equipped with cold start valve plug kit for 1988-85 applications. The runners' cold start valve passages are also blocked off.

CAMSHAFTS

MAXIMIZE PERFORMANCE OF SUPERRAM™ FUEL INJECTION SYSTEMS!

You've heard it before: the internal combustion engine is nothing more than an air pump. The more air pumped in and pumped out, the more power can be generated. Well, it's a little more involved than this but it's a good analogy. It's relevant here because intake manifold design can be made most powerful when tailored around a specific camshaft profile and vice versa. By specifying valve timing events with known intake manifold parameters, John Lingenfelter maximized the "ram effect" of the resonant pressure wave band of the ACCEL plenum/runner combinations. This fills the cylinder with as much intake charge as possible for peak volumetric efficiency and maximum performance. Thorough, repetitive dynamometer testing has been performed to verify engineering calculations and fine tune the design of the SuperRam profiles.

ACCEL Roller camshafts are equipped with a unique feature: prior to final journal grinding, a cast iron distributor drive gear and rear cam journal are pressed onto the remainder of the hardened camshaft. This eliminates the need to use a bronze distributor gear which has to be inspected and replaced frequently due to normal wear of the soft bronze material.

TPI FUEL RAIL ASSEMBLY

This high quality fuel rail assembly was especially designed for TPI-equipped small block Chevrolets. It is also used on ACCEL SuperRam™ EFI Systems for small blocks.

For easier installation, coat the injector O-rings lightly with light oil prior to fitting the rail assembly over the injectors.

Small Block Chevrolet with
TPI or ACCEL SuperRam™ EFI 74704

74704

FUEL LINE FITTINGS

High quality anodized aluminum fittings provide perfect fit to adapt GM fuel rails (Saginaw) or ACCEL's High Pressure Fuel Filter to AN-type fittings.

DESC.	QTY.	FITTINGS	
Fuel Filter			
Fitting Kit	2	3/8 Saginaw to 6AN	74721
	2	3/8 Saginaw to 8AN	74721H

74720

TPI Fuel Rail			
Fitting Kit	1	3/8 Saginaw to 6AN	
	1	5/16 Saginaw to 6AN	74730

74721H

HIGH FLOW FUEL FILTER & PUMP FITTINGS

Anodized in a rich gold, these fittings allow the highest flowrate possible of any Saginaw fitting available. Complete with O-rings, these fittings now accept both 6AN and 8AN fuel line.

High Flow 8AN Fuel Pump Fitting	74711H
High Flow 6AN Fuel Pump Fitting	74711
High Flow 8AN Fuel Filter Fitting	74743H
High Flow 6AN Fuel Filter Fitting	74743

74721H

SENSORS

ENGINE MANAGEMENT SYSTEMS

74761

HEATED OXYGEN SENSOR

This sensor measures the amount of oxygen in the exhaust gases in order to tell the ECU how much fuel to inject for optimum air-fuel mixture. ACCEL's gas-tight ceramic body uses zirconium dioxide stabilized with yttrium oxide for high durability and accurate measurement. Platinum electrodes ensure positive catalytic reaction.

- Heated Oxygen Sensor 74761
- Linear Oxygen Sensor Control Kit 74063

ENGINE MANAGEMENT SYSTEMS

74763

THROTTLE POSITION SENSOR (TPS)

The TPS Sensor attaches to the throttle body telling the ECU the amount of throttle opening. ACCEL's TPS sensor uses high resistance material with an extra light wiper arm for accurate throttle angle measurement and long service life.

- Throttle Position Sensor-SuperRam Systems . . 74763
- Throttle Position Sensor-TBI Systems 74781

ENGINE MANAGEMENT SYSTEMS

74777

MANIFOLD ABSOLUTE PRESSURE SENSOR (MAP)

This sensor monitors manifold vacuum, varying output voltage to the ECU as a function of load placed on the engine, providing necessary data to control fuel enrichment.

- MAP Sensor – 1 Bar 74764
- MAP Sensor – 2 Bar 74776
- MAP Sensor – 3 Bar 74777

COOLANT TEMPERATURE SENSOR (CLT)

ACCEL's Coolant Temperature Sensor employs a thermistor to obtain accurate measurement of engine temperature. As the engine warms, thermistor resistance decreases, letting the ECU know that it can reduce fuel enrichment.

Coolant Temperature Sensor 74765

74765

AIR TEMPERATURE SENSOR

ACCEL electronic fuel injection systems monitor inlet air temperature to provide the ECU with more accurate status of engine operating conditions.

This Air Temperature Sensor is a replacement for the unit supplied with ACCEL SuperRam™ EFI Systems. It helps determine the proper amount of fuel to inject.

Air Temperature Sensor 74773

74773

IDLE AIR CONTROL MOTOR (IAC)

The Idle Air Control permits the ECU to control idle speed by extending or retracting the IAC valve, thereby controlling airflow around the throttle plates. ACCEL's premium quality IAC motor is equipped with precision wound windings for quick response and die-cast valve for consistent airflow.

IAC Motor – SuperRam Systems 74766

74766

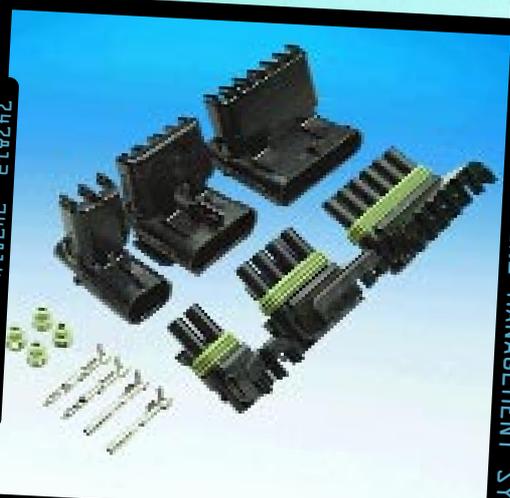

WEATHERPROOF ELECTRICAL CONNECTORS

ACCEL's Weatherproof Connectors provide OEM grade connections for do-it-yourself harness construction. Each package includes a male and female connector housing with the corresponding number of wire seals and terminals.

- Weatherproof Electrical Connector
- 1 Pin 74811
- 2 Pin 74812
- 3 Pin 74813
- 4 Pin 74814
- 5 Pin 74815
- 6 Pin 74816

TORQUE CONVERTER LOCKUP CONTROL KIT

With this kit installed, you control your torque converter's lockup characteristics. ACCEL's Torque Converter Lockup Control Kit connects GM's 700-R4 4 speed automatic transmissions to ACCEL SuperRam™ and Spark/Fuel Management System harnesses. Now you can preset the engine speed and throttle position at which torque converter lockup occurs.

Connecting your PC or laptop to the ACCEL ECU, and using CALMAP software, simply enter the ECU Configuration section and type the desired converter lockup throttle position and RPM.

ACCEL SuperRam™ EFI and ACCEL Spark/Fuel Management with GM 700-R4 automatic trans.	74172

74180

NITROUS OXIDE CONTROL KIT

This kit includes the hardware required to incorporate Nitrous Oxide injection control with ACCEL SuperRam™ Fuel Injection and ACCEL Spark/Fuel Management Systems.

Kit Includes:

- Harness Adapter
- TPI Nitrous Oxide plate Nitrous
- Oxide Solenoid
- Nitrous Oxide Relay
- Toggle Switch (Armed-Unarmed)
- Braided Nitrous Oxide Hose (12 in.)
- Throttle Cable Relocation Bracket
- Longer Throttle Body/Bolts

Big Block Chevy	74181

KNOCK CONTROL KITS

“Knocking” or “pinging” is the sound produced when a portion of the air-fuel mixture in the combustion chamber self-ignites independent of the flame front initiated by the spark plug discharge. Its consequences can range from high engine temperatures to broken valves and pistons, depending on the severity.

With the advances of modern electronics, vehicle manufacturers can now monitor knock and automatically retard ignition timing to eliminate it. ACCEL's Knock Control Kits adapt SuperRam™ and Spark/Fuel Management Systems to GM's knock sensing devices.

Use the 74173 kit to connect your stock GM knock sensor and module to ACCEL SuperRam™ EFI or Spark/Fuel Management Systems.

The 74174 and 74175 kits also include the knock sensor and module, specifically tuned for either small block or big block Chevrolet engines.

Harness Adapter Kit Only. 74173

Harness Adapter with Knock Sensor and Module-Small Block Chevrolet . . 74174

Harness Adapter with Knock Sensor and Module-Big Block Chevrolet . . . 74175

COOLANT FAN CONTROL KIT

This harness adapter kit lets you specify the exact coolant temperature at which the electric coolant fan is switched on.

This kit connects your vehicle's fan to your ACCEL harness and also uses OEM-style wiring and connectors for trouble-free installation and reliable operation.

Using your PC or laptop computer and ACCEL's CALMAP software, simply enter the ECU Configuration section and type in the desired “Fan On” temperature. The ECU will store the number and automatically switch the fan on whenever this temperature is reached.

ACCEL SuperRam™ EFI and ACCEL Spark/Fuel Management with electric coolant fan 74171

JUMPER LINES

The kit consists of three 12" long, 3/8" diameter steel tubes and one 12" long, 5/16" diameter steel tube with the Saginaw flare used in stock GM fuel injection systems. It allows direct connection to TPI fuel rails and ACCEL's High Pressure Fuel Filter.
